PROJECT DETAILS

• Jobdroid — January-2024 - February-2024

Project Description: JobDroid is Australia's leading job portal that connects Job Seekers to Employers. Search jobs across Australia or hire candidates in your industry. I have worked in an AI module, where we have created a chat system from recorded calls with applicants and customer agents, so that Agents can get a quick summary of the call and later get insights and ask any questions from the recorded question and transcript. We have used open source transcription library whisper, for queries we have connected those transcription with LLM using llama-index, Langchain and stored the information in Pinecone vector database.
Responsibilities: Worked as full-stack developer,We have used open source transcription library whisper, for queries we have connected those transcription with LLM using llama-index, Langchain and stored the information in Pinecone vector database.
Technologies: Node, Whisper, OpenAI, Llama-Index, Langchain, Pinecone
Industry: Human Resources

• Varisity - — January-2023 - February-2023

Project Description: Varisity - Customized Fashion Product Website This website offers exceptional, personalized apparel for brands with a focus on high-quality fabrics, timeless design, and modern fits. Customers can start a chat with the team to create a profile and access their exclusive shop where they can customize colors, logos, and text. The site also offers fast shipping, low minimums, and real-time order tracking for a worry-free shopping experience.
Responsibilities: Worked as frontend lead, developed e-commerce and admin portal.
Technologies: React, Typescript, SCSS, SQL.
Industry: Ecommerce

• Eadie March-2023 - December-2023

Project Description: Eadie Technologies Inc. is a Canadian-based company dedicated to advancing glaucoma diagnosis and treatment through patented eye care devices and applications using the Humphrey visual field test. Their innovative technology empowers eye care professionals to provide superior patient care. They maintain a sophisticated backend, collaborating closely with Python-Node.js for real-time data analysis, database integration, and dynamic data visualization using websockets.
Responsibilities: Worked as full-stack developer, developed 2 frontend and a backend application using MERN
Technologies: React, Node, SCSS, MongoDB, websocket.
