+91 9820045154 | hr@augmntx.com

As a multifaceted developer, I specialize in backend technologies, incorporating data science for insightful solutions. Proficient in frontend technologies, I ensure seamless collaboration by crafting robust server-side solutions, managing databases, and implementing APIs, creating well-rounded web applications.

INDUSTRIES: Communications and Media, Automation

TECHNICAL SKILLS

• Python	5 years & 8 months
• Data Science	4 years
• SQL	4 years
• Flask	2 years
• React	1 years
• DevOps	1 years
• Django REST Framework	1 years

SOFT SKILLS

Problem-solving, Time management, Teamwork

PROJECT DETAILS

• Customized Chat application

Project Description: Developed a comprehensive real-time chat application that utilizes Apache Kafka for efficient message streaming and communication. Implemented scalable group chat and individual chat functionalities using Python for the backend, Kafka for message distribution, several modules ,admin panels, React for the frontend,etc...
Responsibilities: Developing Apis , and building chat application with kafka ,web sockets ,implementing webrtc for calls and deployed using Aks
Technologies: python,react,kafka,azure,mysql,mongodb
Industry: Communications and Media

• PyTorch-based Generative AI Chatbot with Data Integration

Project Description: Developed an advanced generative AI chatbot powered by PyTorch, which seamlessly integrates with various data sources, including PDF and CSV files, to generate contextually relevant responses. The chatbot was designed to provide intelligent and informative conversations on diverse topics, making it a valuable tool for enhancing user engagement and support, and for extracting information from unstructured PDF documents and structured CSV files
Responsibilities: Developed full stack application with apis ,chatbot and react
Technologies: PyTorch, Python, Natural Language Processing (NLP), Deep Learning, Data Integration, PDF Data Extraction, CSV Data Extraction
Industry: Automation

EMPLOYMENT HISTORY

• Python Developer January-2019 - December-2023

Description: Building and maintaining the server-side of web applications, handling databases, APIs, security, and performance optimization. They collaborate with frontend developers, ensure data integrity, and implement scalable solutions for seamless application functionality.

EDUCATION

• Bachelors degree in computerscience from SRM 2015 - 2018

LANGUAGES

• English - advanced
