+91 9820045154 | hr@augmntx.com

Over 7+ years of dedicated experience in Android development, proficiently utilizing Java and Kotlin languages.Extensive expertise encompassing various Android architectures, libraries, and featuresets, adapting to different versions and advancements in the Android ecosystem ,

INDUSTRIES: Finance, Ecommerce, Sports, FinTech, Telecommunication, Banking, Logistics

TECHNICAL SKILLS

• Android	6 years
• Kotlin	4 years
• MVVM	4 years
• RxJava	4 years
• gradle	1 years & 6 months

PROJECT DETAILS

• InvestMF — January-2021 - September-2021

Project Description: User can register and login and can setup pin and biometric for login, User can browse through different schemes for investing, User can create profiles to get recommendations, User can invest in different schemes by adding them to cart and placing order, User can check the performance of each scheme in a graph

Responsibilities: s Understanding requirements, implementation of all functionality and testing. Implemented Payment functionality and I had to get API clarification for other team members and decide timeline for my team

Technologies: Android Studio 4.1.1, JSON parsing. , Kotlin, RXJava, MVP,

Industry: Finance

• MarketPlace application — January-2023 - June-2023

Project Description: User can browse through different stores, vendors and category of products , User can order items and get it delivered to their doorstep , User can select different countries and the theme changes accordingly , User can check order history and view its details, User has multiple payment options to select from

Responsibilities: Handled a team of 5 engineers, assign work to junior engineer , review PR , manage hot fix and release. Provide timeline for my team , give live support during festive sales. I was also responsible for using CI/CD pipelines using tools

Technologies: Android Studio 4.1.1, JSON parsing, Many custom views and charts. Navigation Controller, Kotlin, Lint, RXJava, MVVM

Industry: Ecommerce

• Sports App January-2022 - June-2022

Project Description: The project was for basketball team Fans , User can see team matches and statistics like shot map, timeline, standings , User can book tickets for matches, buy team merchandise, browse team media content like blogs, articles, videos and images, We had templatised the app so that it can be easily used for making different apps

Responsibilities: My responsibility was to check the reusability of components for new requirements and plan the tasks and decide how the component would get modified without affecting the previous usages. I also looked after reviewing and merging code of other colleagues. I was also involved in planning and execution of integrating of the toolkit into the main app

Technologies: RXJAVA , MVVM , gradle , JSON parsing, Android Studio, Kotlin, mixpanel, airship

Industry: Sports

• Payment SDK December-2023 - February-2024

Project Description: User can receive payments for raised invoices ,User can get reports of outstanding invoice and other custom filters, User can check the cashflow, profitability and expenses in the app,User can manage vendors, customers, expenses, sales receipts, invoices, estimates, all at one place, Khatabooks and GST related information handling.

Responsibilities: Analysing code for optimizations to reduce time and space,Maintaining and handling of code implemented by other developers,Unit testing and code proof reading for bug detection.Analysing approaches for bug mitigation,Handling Android Linting and Monitoring for resource consumption,Creating notes and mindmaps for managing the bug detection

Technologies: Android Studio, Kotlin, Github

Industry: FinTech

• Telecom services management app July-2022 - December-2022

Project Description: User can browse through different telecom services and offers, User can check currently availed telecom services and their usage and validity , User can recharge and toptup and schedule auto top up for those services, User has multiple payment options to select from, Single code base for multiple telecom operators and countries

Responsibilities: Lead the SWAT team for fixing bugs. Handled weekly releases. Refined and planned the sprints. Reviewed PRs

Technologies: Android Studio 4.1.1, JSON parsing, Kotlin, Lint, RXJava, MVI, multi module approach

Industry: Telecommunication

• worked on KYC SDK for banks October-2021 - December-2021

Project Description: The project was for B2B clients,Client has multiple modules for KYC for end user, Client has multiple modules for KYC for end user , SDK needs to do OCR on user document and compare the data with records, SDK needs to sync with Digi Locker to take data from there and check it with CKYC,

Responsibilities: My responsibility was to integrate all the SDKs which was developed by multiple teams in one form and update the server about users progress and store the current session of the users progress

Technologies: RXJAVA , MVVM , gradle , Retrofit ,JSON parsing, Android Studio 4.1.1 , Kotlin

Industry: Banking

• Store Colleague App January-2020 - December-2020

Project Description: User can register and login to multiple apps using common app and credentials ,User can perform variety of operation in different apps,User can receive deliveries and scan and upload product quantities for raising discrepancies, User can send alerts for food wastage in advance

Responsibilities: Handle release for 30,000 warehouse devices , and gave deployment support for admin managed devices, Managed Multiple apps for warehouse management system , I needed to talk with designers , give a time line for a sprint and provide a feedback in terms of android to design team. Using CI/CD pipelines using tools like SonarQube

Technologies: Android Studio 4.1.1, JSON parsing. Navigation Controller, Kotlin, SonarQube,Nexus, RXJava, MVP, MVVM, Unit Testing, Jetpack Compose, Room.

Industry: Logistics

EMPLOYMENT HISTORY

• Android Developer

EDUCATION

• Bachelors degree in B.tech from SRM University 2010 - 2014

LANGUAGES

• English - native
