PROJECT DETAILS

• LawLink

Project Description: Law-Community is a law portal where all law professionals can register. They can add their education and professional experience detail. User can add their locations via States and counties where his services are available. It gives facility to see the other's profiles as well. It allows to refer the candidates and assign tasks. It has pre-filled database where x-amount of data is loaded. From this database if someone finds their profile it has facility to claim it.
Responsibilities: As As a Team member, I implemented RESTful APIs for profile management. Designed and implemented the home page. Added functionality to update profiles and implemented the forget password and reset password features in the login system. Currently working on claim profile, verify account, and referral system using WebSockets.
Technologies: C# , SQL , JAVASCRIPT
Industry: Legal

• Red-Tron website

Project Description: Red Tron website for Tron (TRX) currency. Have functionality to register user through email and OTP. Implemented sign-in and sign out of registered user. Have Profile page which shows user’s package detail. Have been design Profile page which shows user detail and there is functionality to upload to profile image, buy package detail and withdraw request. Have functionality to show a chain and based on chain it auto credit the TRX. Based on sponsor and users create tree structure view. One admin login to manage whole chain.
Responsibilities: As a Team member, I handled the module of showing the user chain using RESTful APIs. Implemented auto-crediting of TRX based on the user chain. Designed the user profile page displaying package details, buy package history, and withdrawal requests. Implemented RESTful APIs for displaying buy package details and transaction history on the admin page.
Technologies: C# , SQL , HTML
Industry: Industrial

• Online Food Store

Project Description: It is an online food delivery website. Uses firebase database for storing data. Mentioned different types of food dishes according to particular category. There also functionality to add item by selected category

Responsibilities: Designed and implemented components for all features and functionalities using RESTful APIs

Technologies: HTML , CSS , JAVASCRIPT

Industry: Retail

• Inventory Management System

Project Description: Solution to manage inventory for user having a manufacturing plan. Provides a facility to manage user and access via Role-Based Access Control(RBAC). It Provides Following facilities: o Login and Registration o Generate purchase order and invoices and Reports provide payment schedule management. o There is store for all item management o Dashboard to see all reminders of payments, pending purchase order and pending invoice, total cost and total income.

Responsibilities: Designed components for login and registration, including RESTful APIs for username and password validation. Implemented sign-up functionality where the first user is a super Admin and the rest can be assigned roles using RESTful APIs for permission management.
