PROJECT DETAILS

• Ecommerce Support System

Project Description: This application is used as a support system for e-commerce web application. Basically support team resolve customer product issues or trouble shooting. In this application I implemented many Hubspot API like contact, companies, ticket, deal, created custom object for product. I created webhook for updating data in our server DB.
Responsibilities: I have managed frontend and backend both in it. Managed integration with hubspot. Third party API integration.
Technologies: Laravel, MySQL, Hubspot API
Industry: Ecommerce

• CRM for Doctor Clinic

Project Description: It is a portal to manage the data of doctor clinic. Doctor can manage the data of patient like patient personal details, visits, illness and other required details. So using this portal doctor can handle own data properly.
Responsibilities: Designed and developed CRM for doctor's clinic. Managed support part as well.
Technologies: Laravel, MySQL
Industry: Healthcare

• Ecommerce Web Application

Project Description: User can view the product list and description. User can buy the products. User can track the order. Admin can manage the product with stocks. Admin can manage order module.
Responsibilities: Designed and developed eCommerce web application. Manage API development and integration in it.
Technologies: React js, Tailwind CSS, Typescript, Material UI
Industry: Ecommerce

• Resource Management Web Application

Project Description: Resource Management Web Application will manage the resources. Users can see the list and details of resources with avaibility status. Status of the resources will be updated by the admin once resources will occupied or release. So everyone can see the list of available resources.
Responsibilities: Managed frontend and backend both part in this web application.
Technologies: Laravel, MongoDB, Vue js
Industry: Management Software

• Shareio

Project Description: This web application is used for affiliate marketing purpose. User will register and generate own affiliate link of Document. That link user can share and if anyone will purchase document from that link then user will get some commission from it.
Responsibilities: Managed whole web application like design, development and maintenance.
Technologies: Laravel, MySQL
Industry: Marketplace

• Soko

Project Description: Web application/Portal to manage different kind of services between builders and suppliers. Builder can send the inquiry and supplier can give the quote and chat with each other. It is a portal to connect service provider/suppliers and builders.
Responsibilities: Managed admin panel and user panel in this web application.
Technologies: Laravel, MySQL
Industry: Management Software

• Tourism Web Application

Project Description: User can see the list of different packages of tours, they can see the details and book the packages. Admin can manage the tour packages from admin panel. Apart from these there are gallery, order list, testimonial etc features also available. Everthing is managed dynamically from admin panel by admin.
Responsibilities: Managed user panel and admin panel. Managed frontend and backend both in it.
Technologies: Laravel, MySQL, Vue js
Industry: Travel

• Inquiry Management Web Application

Project Description: Inquiry Management Web Application will manage the inquiries. Sales person will manage the inquiry and change the status. Admin can also manage it. Admin can manage all things in the system. HR can manage sales persons but HR can see the list of inquiry. HR can not add, update, delete inquiry. It is role base system.
Responsibilities: Managed frontend and backend part for this. Managed API development and integration in it.
Technologies: Laravel, MySQL, Vue js
Industry: Management Software

• Organization Management System

Project Description: It is a web portal to manage the staff and employees of the company. It is managed as per the role. In system there are different types of roles like Admin, HR, Manager, Employee etc. In this portal there is task management as well. Manager can assign the task to the employee and employee can change the status of task. In this portal there is leave management as well. Employee and HR can manage the leave from this portal. Employee can apply the leave and HR can approve/reject the leave with reason. Apart from that there are other basic informations also in portal like list of yearly leaves and other motivational quotes. So basically this portal was to manage the internal things of the organisation and it is very useful for all.
Responsibilities: Managed database, API development and API integration in it.
Technologies: Laravel, MySQL, Vue js
Industry: Management Software
