• JavaScript	5 years
• JSP	5 years
• Amazon AWS	5 years

PROJECT DETAILS

• Online Property Appraisal System — June-2013 - October-2014

Project Description: This is an online property appraisal system for any user. Users can log on to the system and can provide necessary information related to property & they can get property appraisal information through this tool.

Responsibilities: The technology stack used in this system is NodeJS with all the latest techs like ReactJS, relay with GraphQL, PostgreSQL as primary DB & Redis as a caching tool. Also, the format library is used for front-end forms with ReactJS. Google Maps API Integration is used nicely. The key challenge in this project is the Performance of Concurrent 10k Users.

Technologies: React.js, Relay, GraphQL, Flow Types, Styled Components, Formic, Node.js, ExpressJS, Passport.js, i18next, Knex, Google Maps API, Jest, PostgreSQL, Redis, Docker

Industry: Real Estate

• Financial transaction — December-2014 - May-2016

Project Description: It is a front-end application built in ReactJS technologies. This application is used by money lenders and their customers. Customers can add financial details, upload financial documents, and invoices and connect to third- party account provider services such as QuickBooks, SegeOne, etc. and manage/view their transactions. Moneylenders can also manage their customers, update/modify details provided by their customers, etc. The key challenge in this project is dynamically rendering fields based on the configuration for the type of customers which is derived from API.

Responsibilities: Understanding and analysing Gathered User Requirements. Configuration of ReactJS with node.js. Snapshot testing with jest Framework

Technologies: Node.js, Express.js, React.js, Jest (Snapshot testing framework)

Industry: FinTech
