I'm a Blockchain Developer, I have strong skills in blockchain, specifically in Solidity for smart contracts, and in building user-friendly websites using React, TypeScript, Next.js, and Tailwind CSS. I also know Linux, Python, Docker, and Kubernetes, which helps me manage and deploy applications smoothly. Plus, I've worked with AWS and Digital Ocean for cloud services, ensuring apps are reliable and can grow.

INDUSTRIES: Blockchain, Finance

TECHNICAL SKILLS

• Blockchain	3 years
• Solidity	3 years
• Web 3.0	3 years
• React	2 years
• Docker	2 years

PROJECT DETAILS

• POA Blockchain — April-2023 - September-2023

Project Description: I built a POA (Proof of Authority) blockchain, ensuring efficient, scalable, and secure transaction validation by trusted validators. This blockchain model enhances performance and reduces costs, making it ideal for enterprise applications. It offers fast transaction speeds, high throughput, and strong resistance to censorship and attacks.
Responsibilities: I designed and implemented the POA blockchain, focusing on configuring validator nodes, ensuring network security, and optimizing transaction efficiency. My role included developing smart contracts, maintaining consensus protocols, and integrating the blockchain with existing systems to enhance performance and scalability.
Technologies: Ethereum , Geth , Digital Ocean , Linux
Industry: Blockchain

• Pixel Blockscan — September-2023 - March-2024

Project Description: Pixel Blockscan, inspired by BlockScout, utilizes Erlang, Elixir, and PostgreSQL for backend development, and React with TypeScript and Next.js for frontend. Leveraging Docker, it offers an intuitive interface for blockchain data exploration.
Responsibilities: My role is to clone BlockScout's frontend and customize it to fit our needs, replicating its structure, layout, and functionality. I adapt it to our platform's unique branding and features, ensuring seamless integration.
Technologies: NextJs ,ReactJS and Docker
Industry: Blockchain
Link: https://scan.pixelsoftwares.com/

• Oboswap July-2021 - January-2022

Project Description: Oboswap, a pioneering DEX, transforms digital asset trading. Using cutting-edge blockchain tech, it ensures secure, intuitive, and efficient transactions. Its novel liquidity methods and cross-chain compatibility redefine DeFi standards.

Responsibilities: In Oboswap, I develop Solidity contracts for DEX, covering AMM, liquidity, swaps, and governance. Also, I craft intuitive React UIs, managing state, integrating with backend APIs, ensuring a seamless trading experience. My dual expertise ensures Oboswap's success.

Technologies: Solidity , React ,Typescript, EthersJs

Industry: Finance

• ERC20 Token Generator July-2021 - August-2021

Project Description: Create an ERC20 token generator integrated with a Web2 social media app. This project enables users to easily generate custom tokens and seamlessly use them within the social platform, enhancing user engagement, rewards, and transactions through blockchain technology.

Responsibilities: My role involves designing and developing the ERC20 token generator, integrating it with the Web2 social media app, and ensuring seamless user experience. I manage the backend blockchain interactions, secure transactions, and collaborate with the frontend team to implement intuitive token utilization features for enhanced user engagement.

Technologies: Solidity , JavaScript , HMTL , CSS

Industry: Finance

EMPLOYMENT HISTORY

• Blockchain Developer April-2023 - March-2024

Description: Researching the POS blockchain and blockchain explorers.

CERTIFICATION

• Blockchain certification and training course by Intellipaat 2021

EDUCATION

• Bachelors degree in ECE from JNTUH 2014 - 2018

LANGUAGES

• English - intermediate
