• ASP. Net MVC 5.0	8 years
• MS SQL	8 years
• HTML 5	7 years
• Kentico	6 years
• jQuery	6 years
• KendoUI	5 years

PROJECT DETAILS

• Race winning Brands PMI October-2016 - March-2017

Project Description: Converted existed Dealer E-Commerce website to new proposed website using Kentico CMS 9.0. This web site is for dealer level, and it contains RWB motor spare parts information in a hierarchy such as Application-> Parts Group-> Make-> Model-> Attributes. Where users can view and add selected parts into Cart or Wish list system, they can place the orders through checkout process and displaying each user transaction such as Open, Back, cancelled orders, Order History, Sales Overview, Invoice History, Custom Piston Order and providing track and trace that order. This website is divided into multiple modules such as Dashboard, Search Parts, Cart system, Checkout process, Orders, Transactions, RMA, Contact Us (Google maps) and Account information.

Responsibilities: Understanding the existing website and identify bottlenecks. Involved in client discussions to gather/enhance the features in new system and set-up WebEx meetings for status calls with the client. Implemented solution architecture which makes easy to work on multiple layers at a time without any dependency such as UI (Kentico CMS solution), Custom Java Script libraries, Web Services for DB communication, Business layer for adding rules on Pricing information and Generic Data layer. Proposed changes to improve the performance of the new system using Kentico CMS. Redefined cart system & Search parts screens, so that user can hold his cart items unless places the order. Involved in writing stored procedures for the new system such as search parts query from legacy system (MASS500). Involved in front end work. Involved in unit testing.

Technologies: Dotnet, kentico 10, SQL

Industry: Ecommerce
