I am a software engineer and iOS developer, based in Karachi, Pakistan. I've extensive experience in iOS development, having worked on numerous projects throughout my career. Skilled in a variety of programming languages and frameworks, including Swift, Objective-C, and Reactive Swift.

INDUSTRIES: Healthcare

TECHNICAL SKILLS

• Swift	8 years
• Xcode	8 years
• Swift	6 years
• Rest API	6 years
• Objective C	2 years

PROJECT DETAILS

• Pillway March-2021 - November-2022

Project Description: Pillway is a Canadian modern pharmacy solution that provides around-the-clock care for patients who take multiple medications a day. We pre-sort, package, and deliver the medication straight to your door for free, and we accept all major insurance plans. We organize and package your doses with care and accuracy, and consult with your doctors to manage your refills and renewals. We also provide other pharmacy items that you may need such as vitamins, inhalers, over-the-counter medications, etc.
Responsibilities: Leading implies that the individual is taking charge of the development team and guiding the direction of the module. Maintaining suggests that the person is responsible for ensuring that the module remains functional and up-to-date with the latest iOS platform updates. Creating a new module this may involve brainstorming ideas, designing UI/UX elements, and collaborating with other teams or stakeholders to ensure the module aligns with the overall vision for the app.
Technologies: MVVM
Industry: Healthcare
