Experienced Joget Developer and SharePoint Specialist with a strong background in application design, development, and customization. Skilled in Joget form customization, process flow development, and integration with third-party systems. Proficient in troubleshooting and resolving technical issues, as well as implementing security measures. Extensive experience in SharePoint site migration, user permissions, and Nintex forms and workflows. Dedicated to understanding client requirements and designing systems to meet business needs effectively.

INDUSTRIES: Technology, Ecommerce, Food and Beverages

TECHNICAL SKILLS

• HTML & CSS	3 years
• JavaScript	3 years
• joget	3 years
• MySQL	2 years
• React	6 months

PROJECT DETAILS

• Data Integration tool — June-2022 - April-2024

Project Description: Iqra Technology is developing an integration tool that will be used to integrate Joget with an external system. The tool will enable easy mapping of fields between the two systems. The system has a custom-made scheduler that can be used to schedule the integration tasks within the desired interval time period. The System can also allow users to create connections with the database and refresh the connection from time to time if any table is created to the connection. The system has been designed to auto-eliminate any duplication of data during the interface.

Responsibilities: Understood the requirements and created forms and tables. Created a custom scheduler to schedule the tasks. Created a form to schedule the task as per the requirement. Created custom Java code and dynamic SQL statements to get the records and store them at the destination. Created Processes to run the connection as well as to schedule the integration task.

Technologies: Joget

Industry: Technology

• E-commerce Admin Panel

Project Description: : Implemented a system to create an admin panel for a B2B E-commerce system to maintain customer information as well as the sales order details, Invoice details, Shipment details, and Customer information. Admin can be able to change information by using the admin panel. Also, the system allows the admin to handle the products published on the client side. Client-side products are published on the client side by using the Joget APIs. An OTP system is created to reset passwords by using the client-side programming and Joget APIs.

Responsibilities: Understanding end-user requirements and designing the solution as per requirements. Created the objects for Managing all the client-side details. Created the JSON Tool plugin to Manage the APIs. Created Joget APIs using the Joget API Builder Plugin. Created the processes to send emails and OTPs to the client. Created Form grids and Form repeaters to create the parent-child relationship between the product and the attributes.

Technologies: Joget

Industry: Ecommerce

• Frontend Developer

Project Description: A Microsoft Gold partner company headquartered in California delivering creative IT solutions to its clients for more than 30 years to help customers leverage technology to become more efficient and effective

Responsibilities: Fixed bugs from existing websites and implemented enhancements that significantly improved web functionality. Build reusable classes and styles for multiple blog pages for the same layout. Wrote clean code, clean up, and removed unnecessary things which are added by the editor. Developed UI components such as Autocomplete, Table, Dropdown, Text Input, etc. Helped improve the portal by redesigning the screens without the help of UX designers. Maintained content of websites using a content management system. Making sure that all components of the web page are Mobile-First and deliver the same performance and functionality across all devices and operating systems (Android, IOS, and Windows).

Technologies: SharePoint

Industry: Food and Beverages

EMPLOYMENT HISTORY
