• MarketBox

Project Description: It provides the Marketplace for the organization and the customers. Organizations from different domains can register themselves and create their own Marketplace online with their services and bookings.
Responsibilities: Design and develop the user interface (UI) of the marketplace website or application Implement features such as user registration, login, and account management. Create a search function to help users find the services they are looking for. Develop a payment gateway to allow customers to purchase services.
Technologies: ReactJS, NodeJS, GraphQL, AWS S3, MUI
Industry: Marketplace

• The auto parts shop

Project Description: TAPS is an E-commerce website part of EBC Technologies (USA). It is an online auto part-selling website. This project consists of around 18 micro web services each performing specific functionality.
Responsibilities: Craft visually appealing and user-friendly interfaces for seamless customer experience. Worked on complete micro service-based architecture on multiple environments with every possible service inside the container. Directly interacting with the client and understood the client's requirements then develop accordingly, involved in complete development and responsibilities and handling perfectly. Designing and implementing new features & fixing bugs and ensuring that the website is running smoothly. Ensuring that the website is optimized for performance and scalability.
Technologies: Reactjs, Nodejs, Typescript, PostgreSQL
Industry: Ecommerce

• Invoice & Accounting Management

Project Description: While QuickBooks & Zoho is leading this market, Peymynt is another SaaS product with a modern and yet easy interface for small & mid-size organizations. It allows maintaining clients, invoices, accounting & statements. At the core, it integrates banking platforms to fetch statements from the bank of all over the world.
Responsibilities: Responsible for designing and developing the user interface (UI) of the product. Collaborate with the product manager and designers to understand the user needs and requirements for the Peymynt UI. Create an invoice creation and editing feature. Develop a financial report generation feature. Implement a banking integration feature to fetch statements from banks.
Technologies: ReactJs, NodeJs, MongoDB, AWS, RabbitMQ, Puppeteer,CI/CD
Industry: FinTech

• Entertainment

Project Description: It is a well-known platform that provides its members with exclusive offers on dining, travel, activities, shopping, and more. Additionally, Entertainment connects merchants with loyal members while actively supporting fundraisers and local communities. As a UI developer, the project focused on improving the user interface of the Entertainment platform to deliver a more engaging and user-friendly experience.
Responsibilities: Work closely with UI/UX teams to implement design concepts and ensure a seamless integration of visual elements. Collaborate with cross-functional teams to integrate exclusive offers on dining, travel, activities, shopping, etc., and ensure a cohesive and engaging user experience across various categories. Ensure the responsiveness of the platform across different devices, optimizing the user interface for a consistent experience. Engage in the ongoing maintenance of the frontend codebase, implementing updates and improvements as needed.
Technologies: ReactJS, NextJS , JS
Industry: Entertainment

• Akasa Air

Project Description: It is an application where users can book domestic flights online with Akasa Air at affordable prices. It also provides services to make users' trips easy. It also has an application on google play and apple store.
Responsibilities: Focusing on creating an intuitive and responsive interface for users to book domestic flights. Collaborate with UX/UI teams to enhance the overall user experience, ensuring a seamless and enjoyable booking process. Implement and optimize the online booking system, allowing users to easily book domestic flights. Update and improve the website to enhance the user experience.
Technologies: Reactjs, Nodejs, NextJS, MUI ,Tailwind CSS
Industry: Travel
