• Salesforce Admin	2 years & 6 months
• Salesforce CRM	2 years & 6 months
• Salesforce Data Model	1 years & 4 months
• Salesforce Billing	1 years
• Salesforce Commerce Cloud	1 years

PROJECT DETAILS

• Warehouse Stock Management System — February-2023 - July-2024

Project Description: In project where we have implemented and developed custom apps using force.com for Stock Management System Stock management is a process within the warehouses, where Warehouse members basically receive the stocks from the vendor and store them in designated locations across world within the warehouse site. As and when these stocks are required for a project, they are allocated against the project and later shipped out to the field. A tool is required to properly manage this process and to allow for easier reporting of the allocated and unallocated stocks at the product and location level. Stock allocates to vendor to site then application different functionality like checking stock availability, provide stock to project, and shipping stock to project field All these functionalities are implemented using the process builder, trigger, test class, and implemented aura component for the responsive and dynamic user interface.

Responsibilities: Design requirement documents and functional document with the development team. Build and maintain workflow and validation rules, customization of page layout and record types. Uploading data from CSV file into Salesforce using Data Loader and monitor data qualityand integrity. Designed customreports and dashboards and created customreport types. Development of Apex classes and Triggers for various functional needs in the application.

Industry: Consumer Goods and Services

• Timesheet Management Project February-2022 - January-2023

Project Description: I developed a comprehensive Timesheet Management System on Salesforce, designed to streamline project tracking, time entries, and employee management. The system included custom objects for managing projects, timesheets, and employees, along with automated lead conversion flows that created accounts, contacts, opportunities, and projects based on lead status. Additionally, I implemented an automated email notification system to ensure timely follow-ups, integrated Outlook for seamless email synchronization, and configured Salesforce workflows for efficient task and project management. This solution enhanced overall productivity and client communication.

Responsibilities: Developed custom objects for project, timesheet, and employee management in Salesforce. Automated lead conversion flows for account, contact, opportunity, and project creation. Configured email notifications and integrated Outlook for seamless communication. Built record-triggered flows for automated processes like project creation on opportunity closure. Ensured data accuracy through validation rules and roll-up summaries.
