• Salesforce Admin	3 years

PROJECT DETAILS

• Original Works

Project Description: Implement logic for integration with Sales Logix and Magento in Salesforce. It was e-commerce Portals where Multiple Customers and Portals for summer, and winter products, Coupon, service Requests, etc. for customers to Apply for Credit after the successful purchase of appliances. Integration with PHP.
Responsibilities: My Role was to work on the production bugs, enhancements, and new Implementations. I was more focused on the backend part as the project had external websites for the front-end part.
Technologies: Apex, VF Page, Conga Composer.
Industry: Ecommerce

• Forrester

Project Description: Data migration from data.com to Dun & Bradstreet optimizer. Implemented integration with D6‹B Optimizer using REST APIs. Made code changes and configurations required for the migration. Configured Process Builders, Flows, and Data Integration rules as per the client's requirement.
Responsibilities: I used to work on the backend part when I mostly focused on the custom-built LWC to support the Sales Reps in ease of using the system and guiding the customers. Al so, I have integrated multiple systems and implemented Trigger Framework.
Technologies: Apex, Data.com, Rest API, LWC, Trigger. Process Builder
Industry: SaaS
