PROJECT DETAILS

- Company Internal

Project Description: This application was created for Company employees where employees can fill their timesheets and they can do their internal exercise and submit for review. Then the reviewer can review that and if there is any correction needed, the reviewer will send that back to for re-work. Till the exercise completes this process is going on. All employees details including their Leave details are maintained in this application.
Responsibilities: Developed the Vue.js frontend for intuitive timesheet and exercise management. Created and integrated Nuxt APIs for seamless backend communication. Designed workflows for submission, review, and rework processes to ensure smooth task completion. Managed employee and leave records with optimized database operations. Collaborated with the team to enhance application functionality and ensure performance optimization.
Technologies: Vue.js, Nuxt
Industry: Employee Management

• Entek

Project Description: ProjectPartner is unique amongst project portfolio management tools in that its the primary focus is on accurately recording the costs your organization incurs in carrying out its activities, and allowing extremely flexible recovery of those costs. ProjectPartner supports your agile environment and allows dynamic changes to virtually every aspect. Organizations can maintain and export all Billing related details easily whenever they need. They can generate different types of reports to see their progress in various areas and also can take finance oriented reports through this application. This application has various modules like Timesheet, Projects, Resources, Analytics, Billing and Settings.
Responsibilities: Developed dynamic and responsive user interfaces using Vue.js, Vuex, and Nuxt for various modules like Timesheet, Projects, Resources, and Billing. Implemented state management using Vuex for efficient handling of application data and workflows. Designed and integrated reporting features to generate finance-oriented and progress-oriented analytics. Enhanced application functionality to support dynamic changes and agile workflows across multiple modules. Collaborated with the team to optimize performance, ensuring seamless navigation and data processing across all modules.
Technologies: Vuejs, Vuex ,Nuxt
Industry: Project Management

• Amusement park ticket booking

Project Description: We are developing Digital Multichannel Ticket Booking & Operations Management Applications. In the Multichannel Ticket Booking application, we allow the user to book tickets based on their age. Also, we are updating the site with additional features like booking meals, lockers, and costumes. In Operations Management Applications we are allowing the operation team to update ticket prices and modify details for food items, locker, and retail items. Also, they can update several offers using the application.
Responsibilities: Built responsive UI with Vue.js, Vuetify, and Tailwind CSS for ticket booking and operations management. Managed state using Vuex for dynamic bookings and reservations. Enabled admin functionality to update ticket prices, food items, and offers. Added features for booking meals, lockers, and costumes. Optimized performance and data handling across modules.
Technologies: Vue JS, Vuex, Vuetify. Tailwind CSS
Industry: Ticket Information Management

EDUCATION

• Bachelors degree in CS from PSN College of Engineering 2018 - 2021

LANGUAGES

• English - intermediate
