Detail-oriented and proactive IT professional with experience in application deployment, configuration, and system integration. Skilled in managing user accounts, coordinating with cross-functional teams, and ensuring smooth implementation of warehouse and logistics applications. Strong focus on problem-solving, documentation, and delivering reliable, user-friendly solutions.

**INDUSTRIES:** Logistics, Fashion and Ecommerce

## TECHNICAL SKILLS

| | |
|---|---|
| • Outsystems | 3 years & 5 months |
| • HTML & CSS | 3 years |
| • JavaScript | 2 years |
| • Laravel | 2 years |
| • Java | 1 years |

## PROJECT DETAILS

• Bscale

Project Description: Bscale is a digital platform developed by Bleckmann, focused on serving small to midsize fashion and lifestyle (F&L) B2C clients. It's designed to offer a high level of self-service, especially for client onboarding and daily operations. The platform is mainly built to support B2C workflows running on Bleckmann Autostore warehouse systems, but it is flexible enough to connect with manual operations and other clients as well.
Responsibilities: As a developer on the Bscale project, I am responsible for building and maintaining system integrations particularly between Bscale and platforms like Shopify and JDA ensuring smooth data flows across order processing, inventory, and shipping. I work on automating client onboarding and B2C workflows, especially those involving Bleckmann Autostore warehouse systems. My role also includes handling event-based processes, debugging sync issues, and supporting features like ASN (Advanced Shipping Notice) within the Bscale portal. Additionally, I contribute to the development of user-facing modules such as dashboards and invoicing tools, while collaborating closely with cross-functional teams and partners to align on technical planning and delivery.
Technologies: Outsystems, CSS
Industry: Logistics

• Wapa

Project Description: The WAPA project (short for Warehouse Picking Application) is a system developed to streamline and manage warehouse operations, particularly focused on picking missions, user management, and integration with external systems like WMS (Warehouse Management System).
Responsibilities: In my role, I am mainly responsible for ensuring smooth application deployments and configurations, especially within the WAPA 2.0 project. I work closely with different teams to manage user accounts, set up system environments, and handle integration with third-party platforms like Shopify and JDA. I also help identify and fix issues, make sure the data flows correctly between systems, and support functional testing and documentation. My goal is to make sure everything runs efficiently and that users have a seamless experience.
Technologies: Outsystems, Javascript
Industry: Fashion and Ecommerce

## EMPLOYMENT HISTORY

• Software Developer

Description: Web developer and mobile developer in Outsystems

## CERTIFICATION

- Mobile Specialists by Oustsytems 2025
- Associate Developer by Outsystems 2024

## EDUCATION

- Masters degree in Computer Application from Amrita Vishwa Vidyapeetham 2012 - 2015

## LANGUAGES

• English - native
