• React.js	5 years
• Redux	4 years
• PHP	4 years
• Azure	3 years
• AWS	3 years
• Laravel	3 years
• TypeScript	3 years
• Next.js	3 years
• React Native	3 years
• WordPress	3 years
• Node.js	2 years
• GraphQL	2 years
• Jest	2 years
• Jasmine	2 years
• Vue.js	2 years

SOFT SKILLS

Excellent Communication Problem Solving & Critical Thinking Team Collaboration Client-Facing Communication Agile & Scrum Methodology Time Management Adaptability to New Tech Attention to Detail Project Ownership Requirement Analysis Self-Motivation & Accountability

PROJECT DETAILS

• Zeal overview July-2018 - October-2019

Project Description: Project Description: Internal employee management tool , implemented facility for task assignments to effectively plan, track and manage employee work, logging system for day to day employee activities and handle project progress. - Project setup and building an employees and client interface. - Add redux for global state management in web applications. - Create separate page for interviewer to manage interview process. - Create reusable rest API structure using axios and use it. - Create custom tool in Laravel nova using vue.js. - Contributed to bug-fixing on production.

Responsibilities: Experienced,qualified, proactive professional with 6+ years of experience in working on web app development. Technologies and Frameworks: JavaScript, ReactJS, Redux, TypeScript, Next.js, Vue.js, Node.js, React Native, Express.js, Rest API, Alexa Skill Kit, Google Assistant, Jasmine Unit Testing Full Stack Web Developer with expertise in developing website, customer portal and PWA for any type of business Good knowledge of enterprise products and platforms like e-commerce, healthcare, admin/customer portal using metronic theme and can come up with technical solutions for complex business problems Can work without help from the team leader or manager and directly handles customer questions, concerns, and problems to resolve in the most efficient way Supervised 2 Junior Developers who created frontend using ReactJS and backend using Node.js

Technologies: React.js, Vue.js, Redux, GraphQL, MySQL, Firebase

Industry: Corporate Management

• E-direct(IOS and Android app) January-2017 - June-2018

Project Description: E-direct is an applications serve their purposes in business to the customer system, it simply means that there is an e-Commerce mobile app that sells goods and services directly to individual customers. Apps provide products of fabric items (Detergent such as Arial and Tide). This app currently launch with KSA country with Limited cities and client is expanding it day by day. We have used Big Commerce, OneSignal, SMS getaways, Contenful, Payfort Creating and maintaining server-side application logic Collaborator with front-end developers on combining their front-end elements and components with the server side Cloud technology used Write high quality, readable and testable code Design and optimize applications for high performance, high availability and low latency Work on security and data protection Incorporate data storage solutions (Add your specific data base tech used if known, i. e. MySQL, Mongo DB Integration of user-facing elements developed by front-end developers with server side logic Writing reusable, testable, and efficient code Testing Tool - Jest Unit Testing Design and implementation of low-latency, high-availability, and performance applications Implementation of security and data protection.

Responsibilities: As part of the E-Direct mobile commerce application team, I am responsible for developing and maintaining server-side application logic that powers the platform's core functionality. I work closely with front-end developers to integrate user-facing components with robust backend systems, ensuring seamless performance and user experience. My role involves designing scalable and secure applications using cloud technologies and optimizing for high availability and low latency. I write clean, testable, and efficient code, incorporating best practices in security and data protection. Additionally, I manage database integration (using technologies like MySQL or MongoDB) and support functionalities such as push notifications (via OneSignal), SMS gateways, and payment solutions like Payfort. I also leverage testing tools like Jest for unit testing to ensure high code quality and reliability across deployments.

Technologies: Node.js, MongoDB, Azure Function, UNIT Testing, MySQL,Angular 11

Industry: Ecommerce

• AI-Based Video Call January-2023 - December-2023

Project Description: A web-based platform offering secure video calling, real-time transcription, and session recording features for enterprise clients in the healthcare and consulting domains. The application integrated audio-video processing, transcription via AI, payment processing, and user-level access management.

Responsibilities: Developed frontend components using React.js, Redux, and GraphQL Integrated real-time video using WebRTC and recording via FFMPEG Built and maintained backend APIs using Node.js and Express Integrated Stripe for secure payments Collaborated with UI/UX designers and QA team in Agile sprints Optimized performance and ensured cross-browser compatibility Deployed on AWS and handled CI/CD integration

Technologies: React.js, Node.js, Redux, WebRTC, FFMPEG, Socket.io, GraphQL, MongoDB, AWS, Stripe API

Industry: Healthcare

EMPLOYMENT HISTORY

• Full Stack developer January-2017 - May-2025

Description: Full Stack developer

EDUCATION

• Diploma degree in Diploma Computer Engineering from Government Polytechnic Collage Bhuj 2012 - 2015

LANGUAGES

• English - advanced
