As a NetSuite Developer and Administrator with 6 years of experience, I have honed my skills in delivering high-quality NetSuite implementations that drive business success. My expertise spans SuiteScript (1.0 and 2.0), workflows (SuiteFlows), CSV imports, saved searches, and advanced PDF templates, enabling me to create customized solutions tailored to meet specific client needs. I have a proven track record of developing comprehensive reports and managing inventory, which has been pivotal in ensuring streamlined operations and accurate data management. My proficiency in customizing and optimizing NetSuite dashboards has significantly enhanced decision-making processes for clients, providing them with actionable insights and a clear view of their business performance. I am adept at addressing complex technical challenges and delivering solutions that improve operational efficiency and productivity. Throughout my tenure, I have successfully led multiple NetSuite projects, consistently achieving project goals and exceeding client expectations. My ability to understand business requirements, coupled with my technical expertise, has enabled me to deliver solutions that are both innovative and effective. I am committed to leveraging my skills and experience to help clients optimize their NetSuite environment, enhance operational workflows, and achieve their business objectives. My approach is client-centric, focused on delivering value and ensuring long-term success for every project I undertake

INDUSTRIES: Machine Manufacturer, Discrete Manufacturer, Machinery Manufacturer, Beverage Manufacturer, Medical Equipment

TECHNICAL SKILLS

• NetSuite ERP	5 years
• SuiteCloud	5 years & 1 months
• JavaScript	5 years
• NetSuite Administration	4 years & 6 months
• Consulting	4 years & 1 months

PROJECT DETAILS

• NetSuite ERP Customization

Project Description: As a NetSuite Technical Consultant, I contributed to the end-to-end customization and optimization of NetSuite ERP for a client in the machine manufacturing industry. The primary goal was to streamline operations, automate processes, and enhance reporting capabilities

Responsibilities: Developed the custom scripts to auto the PO to Bill process Designed and implemented advanced PDF/HTML templates for documents such as Purchase Orders and Packing Slips. Configured the approval process and handled the deployment of Suite Bundles. Worked on Inventory Management and Cycle Count Generated reports, set up dashboards, and created saved searches to provide actionable insights and improve decision-making. Performed data imports using the CSV import feature to streamline data entry and system integration.

Technologies: Oracle NetSuite

Industry: Machine Manufacturer

• NetSuite WIP Automation

Project Description: As a NetSuite Consultant, I led the implementation and customization of NetSuite ERP for a discrete manufacturing client, focusing on process automation, inventory management, and logistics integration

Responsibilities: Provided NetSuite Functional demo to client. Initial NetSuite account configurations and setup are done for the new NetSuite implementations. Developed the Suite Script to automate the creation of WIP record based on Sales order creation. Managed all inventory details for the client's company, provided inventory support, and created adjustment entries. Implemented a logistics integration process to track orders

Technologies: Oracle NetSuite

Industry: Discrete Manufacturer

• Mfg Workflow in NetSuite

Project Description: As a NetSuite Consultant, I played a key role in the successful implementation and optimization of NetSuite ERP for a machinery manufacturing client. The project focused on system configuration, data migration, process customization, and operational efficiency.

Responsibilities: Initial NetSuite account configurations and setup are done for the new NetSuite implementations. Completion of data migration for master records and transactions in NetSuite before live. Managed all inventory details for the client's company, provided inventory support, and created adjustment entries. Developed a customized order-to-cash process for specific customers and created tailored workflows for the procure-to-pay process. Developed the custom quality check process Evaluated and recommended future improvements for system optimization

Technologies: Oracle NetSuite

Industry: Machinery Manufacturer

• NetSuite BOM & WIP for Beverage

Project Description: As a NetSuite Consultant, I led the implementation and customization of NetSuite ERP for a beverage manufacturing client, focusing on production process enablement, inventory control, and user training.

Responsibilities: Client Demonstration: Delivered functional Order-to-Cash (O2C) demos, including Bill of Materials (BOM) and Work-In-Progress (WIP) processes, to align client understanding with system capabilities. System Configuration: Performed initial NetSuite setup and account configurations tailored to manufacturing and distribution requirements. Inventory Management: Managed comprehensive inventory details, supported ongoing inventory operations, and executed necessary adjustment entries to maintain accuracy. BOM Implementation: Implemented and managed the Bill of Materials (BOM) functionality, enhancing production planning and inventory utilization. Custom Development: Developed custom SuiteScripts to address specific business requirements not met by standard functionality. User Enablement: Conducted user training sessions covering key areas such as WIP creation and transactional record maintenance, ensuring smooth adoption and self-sufficiency

Technologies: Oracle NetSuite

Industry: Beverage Manufacturer

• NetSuite Compliance Setup

Project Description: As a NetSuite Consultant, I am leading the ERP implementation and customization for a medical device manufacturing client, with a strong focus on compliance, production tracking, and user enablement.

Responsibilities: Functional Demonstrations: Delivered tailored Order-to-Cash (O2C) demos, including Bill of Materials (BOM) and Work-In-Progress (WIP) processes, specific to medical device manufacturing workflows. System Configuration: Configured and set up new NetSuite accounts, ensuring alignment with medical industry standards and regulatory compliance requirements. Inventory Management: Provided ongoing inventory support, created adjustment entries, and maintained accurate records to support strict product traceability. BOM Optimization: Implemented and fine-tuned BOM functionality to enhance production planning, material usage efficiency, and compliance in device assembly processes. Custom Development: Developed SuiteScripts to fulfill unique production and compliance needs, including traceability, lot tracking, and regulatory reporting. User Training: Trained users across multiple NetSuite modules with a focus on WIP creation and transaction records, tailored to meet the operational and regulatory standards of the medical device industry

Technologies: Oracle NetSuite

Industry: Medical Equipment
