PROJECT DETAILS

• Boru Customer

Project Description: This is based on a daily grocery delivery, where users can place orders to nearby shop by web app and they can subscribe there product
Responsibilities: ● Developed responsive and visually appealing user interfaces using Angular, HTML, CSS, and Bootstrap, ensuring a consistent user experience across devices. ● Implemented user login and logout functionality using Angular authentication mechanisms, ensuring secure storage of user credentials and authentication tokens. ● Integrated APIs to fetch and display product data, utilizing Angular's data binding techniques for dynamic updates, filtering, and sorting options. ● Integrated external APIs into Angular applications, implementing API calls using Angular's HttpClient module, and ensuring data security and privacy. ● Integrated Google Maps API into the application, enabling the display of location-based information. ● Utilized conditional rendering to dynamically display different views based on user preferences or selected options. ● Integrated and utilized various jQuery libraries for enhanced functionality and interactivity within the UI.
Technologies: Angular, HTML, CSS, Bootstrap, Jquery
Industry: Ecommerce

• FutureWIngs International

Project Description: This Project is based on real estate CRM. This improves efficiency and provides better service in the real estate industry.
Responsibilities: ● Designed and developed user interfaces for the CRM and website using Angular, HTML, CSS, and Tailwind, ensuring visually appealing and responsive designs. ● Implemented the front-end functionality of the website and CRM using Angular, creating components, services, and modules for seamless user experiences. ● Developed the CRM using the Laravel framework, adhering to best practices and coding standards, to provide efficient and scalable functionality.
Technologies: Angular, HTML, CSS, Tailwind, Jquery, Laravel
Industry: Real Estate

• Print All Result

Project Description: The project is based on a school/college/institute management system
Responsibilities: ● Developed the user interface (UI) for the Institute Management System using Laravel framework, implementing UI components, layouts, and styling. ● Integrated data retrieval from the database using fetch API, fetching and displaying data dynamically in the UI. ● Ensured responsive design and cross-browser compatibility for optimal user experience across devices.
Technologies: Angular, HTML, CSS, Bootstrap, Jquery
Industry: Education

• Taggd

Project Description: The project is based on e-commerce site for clothes and fashion accessories
Responsibilities: ● Implemented the user interface (UI) of the ecommerce site using Angular, HTML, CSS, and Bootstrap, ensuring a visually appealing and responsive design. ● Validated user inputs and implemented session handling to provide a secure and seamless user experience. ● Developed the UI for the home page, product list page, and product details page, incorporating functional elements such as search, filtering, sorting, and pagination. ● Collaborated with the back-end development team to integrate UI components with the necessary functionality, such as adding products to the cart, managing user authentication, and processing orders.
Technologies: Angular, HTML, CSS, Bootstrap, Jquery
Industry: Ecommerce

• WhizzMailer
