• Laravel	3 years & 2 months
• Vue.js	3 years
• Alpine.js	2 years & 4 months
• WordPress	2 years & 2 months
• PostgresSQL	1 years & 3 months
• Livewire	1 years & 1 months

PROJECT DETAILS

• Loan Aggregator Platform

Project Description: It is an AI to tailor a single mortgage application to your circumstances, matching you with multiple lenders competing for your business. This allows you to receive multiple offers within 24 hours without affecting your credit score, helping you find the best mortgage rates.
Responsibilities: Designed and built a full-featured loan aggregator platform for Canadian users using the TALL Stack (Tailwind, Alpine.js, Laravel, and Livewire) along with Vue.js. Developed secure, scalable APIs and complex MySQL database structures to support borrower profiles, loan applications, and lender integrations. Used Laravel Blade and Tailwind CSS to create a smooth and user-friendly frontend. Integrated third-party financial APIs to deliver real-time loan offers. Ensured data protection compliance and platform security. Led unit testing using PHPUnit to boost reliability during fast development cycles. Worked closely with designers and product teams, and used AWS for basic cloud service needs.
Technologies: PHP, Laravel, VueJS, Tailwind,Unit Testsing
Industry: FinTech

• E-commerce platform

Project Description: Book Commerce, similar to platforms like Amazon, offers an extensive selection of millions of titles, catering to both retail customers and business orders. This versatile marketplace not only facilitates the purchase of popular novels and bestsellers but also provides a wide range of academic textbooks, reference materials, and specialized literature for various industries. With options for bulk purchasing, businesses can easily meet their needs for employee training, research, or client gifting. The platform's user-friendly interface and robust search functionalities make it convenient for users to find specific titles, explore new releases, and read customer reviews, ensuring a comprehensive and satisfying shopping experience for all types of book buyers.

Responsibilities: Built a full-featured eCommerce platform for book sales with a fast, modern user experience using Nuxt3 and Vue3. Integrated Elasticsearch for smart and quick search based on categories and user behavior. Improved performance with optimized database queries and Redis caching to handle high traffic. Worked closely with the backend team for smooth API communication and consistent data flow. Applied SEO best practices to increase visibility and boost search rankings.

Technologies: Laravel, Next, VueJS, AWS

Industry: Ecommerce

EMPLOYMENT HISTORY

• Solution Analyst — Solution Analyst - February-2021

Description: I am a Full Stack Developer with over 7 years of experience building secure and fast websites and web apps. I work mainly with Laravel and PHP, and I’m good at writing clean, tested code using tools like PHPUnit. I also know how to check for security issues in PHP code. On the front end, I use Vue.js and have a basic understanding of React.js. I’ve worked with databases like MySQL, MongoDB, and PostgreSQL, and I’m comfortable using Git and Bitbucket for version control. I know how to use AWS at a basic level and follow clear steps to make sure everything runs smoothly using CI/CD. I enjoy working with teams and using tools like Jira, Trello, and Slack to keep projects on track.

EDUCATION

• Bachelors degree in Computer Science from R K University — 2018 - 2021

LANGUAGES

• English - advanced
