A seasoned mobile app developer with over 11 years of experience delivering high-quality, scalable solutions. Specialized in React Native for building cross-platform mobile apps that provide native-like performance and modern UI/UX. Originally focused on iOS development using Objective-C, Swift, and Kotlin with SwiftUI for dynamic UI design, now leveraging extensive mobile expertise to create consistent, user-centric applications across platforms. Proficient in integrating mobile databases, secure data management, and CI/CD pipelines to ensure robust and reliable applications.

INDUSTRIES: Finance, Food Delivery, Ecommerce, Healthcare

TECHNICAL SKILLS

• SwiftUI	10 years
• Xcode	10 years
• Git	10 years
• Kotlin	10 years
• Swift	10 years
• Github	10 years
• JavaScript	9 years
• Android Studio	8 years
• Redux	8 years
• SQL MySQL	8 years
• RxJs	7 years
• React Native	7 years
• AWS	6 years
• Azure	6 years
• Apache	6 years
• SQLite	6 years
• Firebase	5 years
• Firestore	5 years
• GraphQL	5 years
• TypeScript	5 years

SOFT SKILLS

Communication, leadership, Problem-solving, coordination, Critical thinking, collaboration, Teamwork, Time management, multi-tasking, Research and development

PROJECT DETAILS

• Financial Management Project

Project Description: I developed a comprehensive financial management application using React Native to support cross-platform functionality. The project focused on integrating native modules that brought legacy iOS functionalities into the modern React Native environment. This enabled features such as real-time transaction syncing, budgeting tools, and secure banking API integrations.
Responsibilities: I was responsible for configuring CI/CD pipelines using Bitrise to ensure smooth and reliable updates. My role included coordinating with backend teams to integrate Firebase for real-time data synchronization and designing a user-centric interface that simplified complex financial tasks.
Technologies: React Native, Firebase, AWS
Industry: Finance

• FoodTech Project

Project Description: In this project, I built an innovative FoodTech application designed to deliver personalized meal recommendations and real-time order tracking. The application was developed in React Native, integrating essential native modules to enhance the user interface and overall experience.
Responsibilities: My responsibilities included configuring Azure cloud services to support scalable infrastructure and secure data processing, implementing secure authentication mechanisms, and integrating payment gateways for seamless transactions. I also ensured that the application managed local data effectively using Core Data and maintained synchronization with Google Firebase.
Technologies: React Native, Core Data, Google Firebase, Azure
Industry: Food Delivery

• eCommerce Project

Project Description: I led the development of an advanced eCommerce mobile platform using React Native, targeting both iOS and Android devices. The project featured secure payment integrations, real-time notifications for orders and promotions, and mapping services for order tracking.
Responsibilities: I integrated secure payment gateways and managed state using Redux, ensuring an efficient and responsive user experience. Additionally, I implemented GraphQL and REST API integrations for dynamic content updates and facilitated real-time order tracking functionalities to enhance user engagement.
Technologies: React Native, Redux, GraphQL, REST APIs
Industry: Ecommerce

• Telemedicine & Health Monitoring

Project Description: This project involved developing a telemedicine application that enabled virtual consultations and remote health monitoring. The application was built with React Native, with crucial native modules incorporated to support advanced features like video conferencing and health data synchronization.
Responsibilities: I integrated secure communication protocols and connected the app with health APIs such as Apple HealthKit and Google Fit to fetch real-time health metrics. Furthermore, I configured CI/CD pipelines using Bitrise and Jenkins to maintain rapid deployment cycles, ensuring that updates were both efficient and reliable.
Technologies: React Native, Bitrise, Jenkins, Apple HealthKit, Google Fit
Industry: Healthcare

• Fitness & Health Tracker Project

Project Description: I created a mobile health and fitness application that integrates with wearable devices to track real-time fitness metrics. Developed in React Native, the app leverages Bluetooth Low Energy (BLE) to facilitate seamless data synchronization between wearable devices and the mobile platform.
Responsibilities: My role involved implementing BLE bridges, providing personalized health insights based on real-time data, and generating weekly performance reports for users. I also streamlined the app deployment process by setting up automated testing and CI/CD pipelines using Bitrise, which significantly improved the reliability of updates.
Technologies: React Native, BLE, Bitrise
Industry: Healthcare

EMPLOYMENT HISTORY

• Lead React Native Developer

Description: At Techrays Labs, I lead the development of cross-platform applications using React Native, creating shared codebases that effectively serve both iOS and Android. I successfully integrated legacy iOS components into React Native modules to boost performance and usability. Additionally, I implemented Firebase to ensure secure authentication and real-time data synchronization, providing users with a seamless experience.

• Lead Technology August-2023 - January-2024

Synechron
Description: In my role at Synechron, I architected a hybrid solution that combined the strengths of React Native and native modules, significantly enhancing app functionality. I was responsible for integrating GraphQL APIs and managing CI/CD pipelines using Jenkins and Bitrise, which streamlined the development process and ensured reliable deployments.

• Sr. Software Developer (React Native Focus) November-2022 - May-2023

Grid Dynamics
Description: At Grid Dynamics, I enhanced mobile app modules by incorporating React Native to support secure telemedicine features. My contributions included integrating third-party SDKs and leveraging Apple/Google Health APIs to provide a seamless and robust user experience, ensuring the application met high standards of performance and security.

• Sr. Software Developer April-2022 - November-2022

Cygnet Infotech
Description: During my time with Cygnet Infotech, I transitioned legacy iOS codebases into a modern React Native framework to improve scalability and maintainability. I introduced a modular architecture that enhanced code reusability, enabling faster development cycles and more efficient maintenance across multiple platforms.

• Sr. Software Developer (iOS & React Native) May-2016 - October-2021

Technovate Solutions
Description: At Technovate Solutions, I was pivotal in developing multiple iOS applications using Swift and SwiftUI while laying the foundation for cross-platform solutions with React Native. I collaborated closely with teams to transform mobile app architecture and integrate React Native components, setting the stage for future cross-platform developments.

• Team Lead – Mobile Application Development October-2014 - March-2016

Evince Development
Description: As the team lead at Evince Development, I managed iOS application development while steering my team toward adopting cross-platform strategies using React Native. I ensured projects were delivered on time and met high-quality standards by emphasizing effective team collaboration and modern development practices.

• iOS Developer June-2012 - May-2014

Regius-IT Solutions

Description: At Regius-IT Solutions, I developed and maintained high-performance iOS applications that established my strong foundation in mobile development. My focus on optimizing performance and ensuring an excellent user experience laid the groundwork for my later transition into cross-platform development with React Native.

EDUCATION

• Masters degree in IT from GTU 2013 - 2017

LANGUAGES

• English - advanced
