INDUSTRIES: Automobile, Management Software, Healthcare, e commerce

TECHNICAL SKILLS

• PHP	5 years & 2 months
• Laravel	5 years & 2 months
• Vue.js	2 years & 3 months
• Node js	2 years & 1 months
• React js	2 years & 5 months

PROJECT DETAILS

• Job Potal/Mobile Application

Project Description: In this portal User can register and login to search the job. After login user can see the list of all the jobs based on their profile. User can apply on the job. These jobs are sync with Salesforce. So saleforce recruiter will change the status of user. It will reflect to the user portal and user will get the notification. All jobs are sync with our portal and salesforce.
Responsibilities: In this application I managed mostly all the backend part. I created the Rest APIs in it. Managed Notifications as well. Managed Syncing part between PostgreSQL and Salesforce. Coordinate with team members for the deployment as well. Managed client communication as well.
Technologies: PHP, Laravel, PostgreSQL, Rest API, Docker, AWS, Rest API
Industry: Automobile

• Resource Management Web Application

Project Description: : The Resource Management Web Application helps efficiently track and manage resources. Users can view a comprehensive list of available and occupied resources. Each resource comes with detailed information, including availability status. Admins can update resource status when they are occupied or released. The system ensures real-time visibility of resource availability for all users. Streamlined access reduces conflicts and enhances resource utilization. A user-friendly interface allows quick searches and filtering of resources. Automated notifications keep users informed of resource status changes. Secure access control ensures only authorized users can update resource details. Boost productivity by optimizing resource allocation with minimal effort.
Responsibilities: I created Frontend and Backend both in it. Coordiante with other team members for the design and QA part. Managed client communication as well.
Technologies: PHP, Laravel, MySQL, HTML, CSS, Bootstrap, Javascript, jQuery
Industry: Management Software

• Organization Management System

Project Description: It is a web portal to manage the staff and employees of the company. It is managed as per the role. In system there are different types of roles like Admin, HR, Manager, Employee etc. In this portal there is task management as well. Manager can assign the task to the employee and employee can change the status of task. In this portal there is leave management as well. Employee and HR can manage the leave from this portal. Employee can apply the leave and HR can approve/reject the leave with reason. Apart from that there are other basic informations also in portal like list of yearly leaves and other motivational quotes. So basically this portal was to manage the internal things of the organization and it is very useful for all.
Responsibilities: Developed Database Schemas in it and managed all the backend part in it. Coordinate with team members.
Technologies: PHP, Laravel, MySQL, HTML, CSS, Bootstrap, Javascript, jQuery.
Industry: Management Software

• Health Management

Project Description: Health related customized blog website. User can register and view the articles, news, print issue, docuemtns releted to Health. All these things will upload by admin dynamically. Also user can view the list of all the products of hospital/health related and also can view the company of that product. User can do inquiry for that products. All these products will manage by admin dynamically.
Responsibilities: Managed Frontend and Backend both in this web application. Coordinate with team as well.
Technologies: Symfony 3.4, MariaDB, HTML, CSS, Bootstrap, Javascript, jQuery, Twig, Doctrine
Industry: Healthcare

• E-commerce Fulfillment System

Project Description: Developed and maintained a complete ecommerce fulfillment system including shipping, returns, cancellations, and financial modules. Integrated eShipper API for shipping rate calculations, label generation, and tracking. Implemented returns management with automated checks and cancellation rules engine. Built a robust financial backend to handle vendor earnings, commissions, and refunds while ensuring backend accuracy through test coverage and reconciliation tools.
Responsibilities: Backend development, API integration, financial module implementation, system testing.
Technologies: Node.js, React.js, MySQL, eShipper API, Docker, AWS
Industry: e commerce

• Learning Management System

Project Description: A scalable web application that allows educational institutions or training companies to manage online courses, students, and instructors. It includes role-based access for Admin, Instructor, and Student. Students can browse and enroll in courses, access course materials such as videos, PDFs, and quizzes, and track their progress. Instructors can create and manage courses, upload content, monitor student engagement, and generate certificates upon course completion. Admins have full control over users, courses, and platform settings. The platform also supports payment gateway integration for paid courses, secure authentication, and responsive design across devices.
Responsibilities: Write well designed, testable, efficient code by using best software development practices. Assume ownership of code throughout development, staging, testing and production. Troubleshoot website/web application problems. Code pages, files, test, debug and deploy. Coordinate with other designers and programmers to develop web projects.
Technologies: PHP, Laravel, Vue js, MySQL, HTML, Tailwind CSS, Javascript, jQuery.
Industry: Management Software
