PROJECT DETAILS

• Audit Application — June-2024 - September-2024

Project Description: The Zea Audit application is a robust audit management system designed to streamline the creation and management of audit entities and processes. The application supports both traditional and agile audit methodologies, enhancing risk assessment, control tracking, and audit entity management.
Responsibilities: Designed and implemented workflows for audit entity and audit creation modules. Configured risk assessment models and control mappings within the application. Developed UI and business logic following OutSystems best practices for scalability. Ensured seamless integration of audit attributes, controls, and risk ratings. Provided technical and functional support for testing and resolved identified defects. Participated in status meetings to align development with project objectives. Conducted unit testing to ensure compliance with project requirements and quality standards.
Technologies: OutSystems Service Studio, JIRA, Service Center
Industry: Consumer Goods and Services

• Warehouse for Canadian retailer — July-2022 - March-2024

Project Description: This mobile application developed using low-code platform - OutSystems aims to manage Inventory systems and generate reports, problems, samples and inspection report about storage and building where they store potatoes based on plant and region.
Responsibilities: Handled Database for User Management. Created Roles and Access Specifies for the User Module. Responsible for developing and analyzing the code. Suggest and verify the programs to meet customer requirements. Participating in daily scrum meetings, sprint planning, unit testing and bug fixes. Participated in the requirement gathering and analysis phase of the project in documenting the business requirements with various business users.
Technologies: OutSystems Platform
Industry: Goo
