As a seasoned Front-End Developer with 9 years of experience, I bring deep expertise in technologies such as JavaScript, React.js, ColdFusion, HTML, jQuery, and CSS. I specialize in building scalable applications and RESTful APIs, with a strong focus on Test-Driven Development (TDD) and accessibility standards. I am proficient in GitHub Pipelines, recognized for my quick learning ability, and valued as a proactive team player. My core strengths lie in delivering high-quality software, accelerating project success, and consistently thriving in challenging environments.

INDUSTRIES: Telecommunication, Insurance

TECHNICAL SKILLS

• Cold Fusion	9 years
• FW 1	9 years
• Cold Box	9 years
• SQL	9 years
• Java Script	9 years
• HTML	9 years
• CSS	9 years
• jQuery	9 years
• React	6 years

PROJECT DETAILS

• WebALC

Project Description: WebALC was originally developed to price the leased line of telecommunications. It provided the cost given by telecommunications plus the profit margin. The profit margin calculated has been a constant 11% margin. Currently, WebALC serves as a pricing agent for the technologies offered at Equant. The commercial teams use this tool to generate quotes for customers based on several criteria provided by the application to create a case for the customers. Several pricing engines are used depending on the country where the request is being made. The salesperson has the ability to generate a quote manually or rely on the application to generate a quote automatically based on the pricing engine. If a quote is not available, the salesperson has the ability to request the pricing analyst to research the request and price the request based on the research.

Responsibilities: Understood the project modules and requirements. Worked with the team on designing and implementing solutions to fulfill client requirements using Agile and Scrum methodology. Involved in delivering end-to-end support for assigned tasks, including testing, bug fixing, and moving changes across all environments. Responsible for communicating with the client from offshore and gathering requirements. Handled the production database while taking ownership of user requirements. Prepared builds for deployment in production and other lower environments. Provided production support and handled L3 tickets.

Technologies: Coldfusion,Oracle SQL developer,JQuery,HTML,CSS, Javascript,Postman,SOAP Ui,FuseBox

Industry: Telecommunication

• First Funding

Project Description: Correspondent lenders need the wire order process to be easy and transparent. FirstFunding provides real-time reporting of warehouse line activity, the ability to manage purchases, comprehensive reporting and risk management through one simple online platform. FirstFunding makes it easy to manage the loans that are on your line at every stage of the transaction from wire request to purchase, reconciliation and producing 1098s. FirstFunding generates reports and gathers critical data including days online, outstanding purchases, expiring locks, trends and transactional reports. With FlexClose Funding, you have the power to dictate the exact time for funding without delays from Fed processing or waiting on bank receipt. This level of control also removes any doubt related to wire fraud schemes.

Responsibilities: Understood the project modules and requirements. Worked with the team on designing and implementing solutions to fulfill client requirements using Agile and Scrum methodology. Delivered end-to-end support for assigned tasks, including testing, bug fixing, and migrating changes across all environments. Communicated with clients from offshore to gather and clarify requirements. Handled the production database and took ownership of user requirements. Prepared builds for deployment in production and lower environments. Managed APIs used for data transfer. Guided and mentored freshers with functional knowledge. Worked in Agile methodology with active participation in sprints. Expedited product delivery timelines by prioritizing tasks and managing resources according to business needs. Performed peer code reviews using GitHub Enterprise to improve error detection and debugging. Successfully delivered an average of 10 story points in 14-day sprints within the given timelines.

Technologies: Coldfusion,Oracle SQL developer,JQuery,HTML,CSS, Bootstrap5.3.3,Javascript,React,DOMO(powerbi),TypeScript

Industry: Insurance

EDUCATION

• Bachelors degree in Telecommunication Engineering from Trident Academy of Technology — 2010 - 2014

LANGUAGES

• English - native
