Experienced Full Stack Developer with a strong track record of delivering scalable web and mobile solutions across industries such as OTT, e-commerce, and social networking. With expertise in Node.js, React.js, and modern cloud technologies, he specializes in building high-performance applications that blend intuitive front-end experiences with robust backend architectures. Known for his problem-solving mindset and ability to optimize complex systems, he consistently delivers impactful, user-centric digital products.

INDUSTRIES: Home Services, Dating, Ecommerce, OTT

TECHNICAL SKILLS

• Node js	6 years & 3 months
• React	6 years & 3 months
• AWS	6 years
• Mongo DB	6 years
• SQL MySQL	4 years

SOFT SKILLS

Time management, Critical thinking, Problem-solving

PROJECT DETAILS

• Star Clean

Project Description: It's a mobile based cleaning service platform with two apps User App and Rider App
Responsibilities: Developed a mobile-based cleaning service platform with two apps User App and Rider App using React Native, backed by Node.js Express and MongoDB Implemented complete order lifecycle: from service booking, pickup, and warehouse processing, to final delivery, with real-time tracking and notifications. Built secure and scalable REST APIs, integrated role-based authentication, and used Socket.IO for order status updates and rider coordination. Enabled in-app payments, automatic invoice generation, and an admin backend for service or pricing management and order tracking.
Technologies: Node.js (Express), MongoDB
Industry: Home Services

• Blindly

Project Description: It's a social networking platform similar to Facebook
Responsibilities: Build a comprehensive social networking platform similar to Facebook, utilizing Node.js (Express), MongoDB, and React JS and OpenAPI. Developed a dynamic news feed that aggregated posts, pictures, and videos from friends. Focused on optimizing both the frontend and backend for performance, ensuring reduced load times and a seamless experience across devices. This project resulted in a fully functional, scalable social networking site that provides a rich set of features and a smooth, responsive experience for users.
Technologies: Node.js (Express), MongoDB and React JS
Industry: Dating

• TBZ Creation

Project Description: An innovative e-commerce platform specializing in high-quality wooden furniture, designed to provide customers with a seamless and personalized shopping experience.
Responsibilities: Built an e-commerce platform specializing in wooden furniture, an innovative e-commerce platform specializing in high-quality wooden furniture, designed to provide customers with a seamless and personalized shopping experience. One of the standout features that I worked on is the DIY (Do-It-Yourself) customization option via 3d model based dynamic rendering over a mobile application. This feature enables users to select raw materials, choose specific design elements, and configure dimensions to create bespoke furniture pieces tailored to their tastes. The customization process is intuitive and interactive, providing real-time previews of the customizations as customers make their selections.
Technologies: Node.js (Express), MongoDB
Industry: Ecommerce

• SonyLiv

Project Description: SonyLiv is one of India leading OTT platforms offering live TV, sports, movies, and original content. The project involved enhancing the platform frontend using React js and Vanilla JS, ensuring high performance and seamless user experience across devices.
Responsibilities: Worked as React js developer on Sony OTT & Live Streaming Project. Implemented new features like concurrency handling, added GA for user behaviour, content driven form for different platforms, etc.
Technologies: JavaScript, React.js, Vanilla JS
Industry: OTT

EMPLOYMENT HISTORY

• Assistant Team Lead

Description: Designed and developed scalable backend services using Node.js (Express.js), building RESTful APIs with secure authentication and optimized performance. Integrated databases like MongoDB and SQL, implementing schema design, indexing, and query optimization for high-performing applications. Built real-time features such as chat, order tracking, and notifications using Socket.IO and event-driven architecture. Developed front-end applications with React.js, Next.js, and React Native (Expo), ensuring responsive and intuitive user interfaces. Implemented OpenAPI specifications for API documentation and seamless integration across microservices. Worked on cloud deployments and serverless utilities using AWS services (Lambda, S3, EC2) for file uploads, compression, and storage management. Integrated third-party services and payment gateways, enabling secure in-app payments, invoicing, and transaction management.

EDUCATION

• Bachelors degree in Computer science from Jamia Hamdard University 2014 - 2018

LANGUAGES

• English - intermediate
