+91 9820045154 | hr@augmntx.com

Full Stack Developer proficient in React.js, Node.js, Express.js, Next.js, and SQL. Experienced in using version control systems like Git and familiar with CI/CD tools including GitHub Actions, GitLab CI/CD, and Jenkins. Skilled in working with databases such as PostgreSQL and MongoDB, and deploying applications using AWS EC2, AWS RDS, and Docker.

INDUSTRIES: Industrial, Hospitality, Automobile, Community

TECHNICAL SKILLS

• React js	5 years
• Node.js	5 years
• Type script	5 years
• Express.js	5 years
• Web RTC	3 years

PROJECT DETAILS

• VR On-Ground Support Application

Project Description: Developed web and virtual reality (VR) applications to enhance on-ground support operations. Implemented real-time streaming from VR cameras to the web, allowing users to view live feeds seamlessly. Enabled real-time uploading of images and PDFs, which are rendered within the VR environment for immediate access. Facilitated web users to make 2D annotations that are instantly displayed in 3D within the VR space, improving communication and collaboration. Incorporated functionality to record user sessions along with captions, allowing for future review and analysis. Integrated real-time rendering of 3D objects in the VR environment, controlled directly from the web interface.
Responsibilities: Lead the design, development, and deployment of end-to-end AI-powered applications. Make architectural decisions for scalable backend and frontend systems.
Technologies: React.js, Node.js, TypeScript, C#, Unity, Socket, WebRTC.
Industry: Industrial

• My Circle

Project Description: This web app is created to show a menu in cafes or show any content in tv or android device. Users can create templates in it and add items for lunch or dinner or any kind of menus and save it. Then the user will install an android application on the device and show one id in it . Then the user will add the same id in react app then the attached content with screen is showing in android devices. Also provide a predefined template for users. Users can use predefined templates or edit predefined templates. Also users can show multiple items on screen like if a user wants to create two boxes or 3 boxes in one screen and add three different types or template or link.
Responsibilities: Lead the design, development, and deployment of end-to-end applications.
Technologies: React Js, Node Js, Express Js, MongoDB , FireBase
Industry: Hospitality

• Catalogue Management

Project Description: We are managing the information about the parts of automobile industries. In our tool users can search information about the automobiles parts and users can select parts and generate PDFs. Based on selected parts, users can download customized PDFs with sorted company information. I have deployed the frontend and backend on ec2 with nginx along with SSL certificate
Responsibilities: Design and development of front and back end also Make architectural decisions for scalable backend and frontend systems.
Technologies: Python, Django , React js, EC2, AWS RDS, Nginx, Gunicorn
Industry: Automobile

• JAPA

Project Description: Create this app to create communities. Users can join communities. After joining communities users can comment on it and create sub-communities. And admin can check comments, delete comments and communities
Responsibilities: a community-building platform where users can join communities, post comments, and create sub-communities. Built the frontend in React.js and backend APIs in Node.js with MongoDB. Implemented features for user interaction, admin moderation, and role-based access control.
Technologies: Node Js, React Js,MongoDB.
Industry: Community

EDUCATION

• Masters degree in MCA from GTU 2019 - 2021

LANGUAGES

• English - intermediate
