I am a Full Stack Developer with over 4 years of experience building scalable and high performing web applications. I have worked on E-commerce platforms, SaaS products, and application migration projects with a focus on clean architecture and performance optimization. My technical expertise covers both frontend and backend development using React, Angular, and Node.js. I design and implement RESTful APIs, microservices, and cloud based deployments on AWS. I am skilled in PostgreSQL and NoSQL databases, ensuring data efficiency, reliability, and security. I have experience setting up CI/CD pipelines, managing server configurations, and automating deployment processes. I have successfully led migration projects, transforming legacy systems into modern, maintainable solutions. In E-commerce, I have integrated payment gateways, order tracking systems, and product recommendation modules. In SaaS applications, I have developed multi tenant systems with authentication, billing, and analytics. I have also integrated AI based features such as chatbots and intelligent recommendations to enhance user experience. I believe in writing clean, modular, and well documented code that meets business goals. I value clear communication, on time delivery, and continuous improvement in every project. My goal is to build reliable, user focused applications that create measurable results. If you are looking for a dedicated full stack developer for your next project, I would be glad to work with you
