Problem-solving, Teamwork

PROJECT DETAILS

• US Rental Property Management

Project Description: Property management system to Property Owners and Tenant. Property owner can manage their property, system help to collect their rent, give notification to Tenant
Responsibilities: This system has lots of 3 party integration like Payment system, notification system, Tenant profile Check and screening and Subscription system. Code is constantly upgraded to match todays technologies and implementing new features.
Technologies: .Net Framework, MVC, MSSQL, Azure, WebAPI
Industry: Software and Platforms

• Warehouse Management

Project Description: Its helps automating warehouses their daily activities. System divided in lots of functioning projects like, Order Processor, Work Station, Warehouse Web, Handhelds. Modules are Order Management, Item pick up Management, Shipping Networks, Billable activities, Item Receivers, Order and Item Returns solutions, Item picking processing, Item receiving and locations managements.
Responsibilities: Ideally this software covers all parts of Warehouse functionalities and provide solution for different platforms. From desktop for Receiving Item to put that item in particular location in warehouse using Android device. For taking care of all solution, we divide software in different projects as no one need to use all functionalities at one go, also create sure centralize APIs and create communication of different database and APIs, Its also help us to maintain future scalability of Software. Create Azure messaging services and windows services to communicate different project for smooth data transfer and communication. We have also provided mobile app (Xamarin) for warehouse workers to location-based picking and receiving Items. Create Power BI Desktop and Web Service for monthly and quarterly reports and chats. Get working knowledge of Kubernetes and MSMQ and RabbitMQ.
Technologies: Net core, MVC, MSSQL, Xamarin, Web API, Vue.js, Power BI, Docker
Industry: Software and Platforms

• MyIzzo

Project Description: MyIzzo was job portal site. Its invites Employer to post jobs to MyIzzo and Applicant can apply through MyIzzo.
Responsibilities: The one of main feature of MyIzzo was Resume parser where applicant can upload his/her resume and according to key feature MyIzzo can create Applicant profile itself. MyIzzo also provided video recording application, also can set up live interview if both employee and applicant agree to it
Technologies: ASP.Net, jQuery, MS SQL
Industry: Software and Platforms

• Social Network

Project Description: This Social Network site use for connecting people, upload photos, upload event, make them friends and so on. When user sign up for site we gave them 2 bot friends to help and communicate with site and other people.
Responsibilities: User can find friends, accept friend request, site also give friends suggestion and also notify you for any upcoming events, like birthday, friend visit etc. Site also provide functionality call Radar where you can find any of your friends in between specified Kilometre radius like 2km, 5km radius. If user your notification was on and if his friend come in that radius then Radar gives user a notification about his friend is near by him. Site also have mobile version, which can be used in different platform like universities, companies, chat groups. This mobile version are work as stand alone site, so you can differentiate site rules and policies also their looks and feels also can safe guard you data from other mobile version.
Technologies: ASP.Net, jQuery, MS SQL
Industry: Software and Platforms
