Experienced Laravel Developer with 5+ years in building scalable web applications, SaaS, and ERP solutions. Skilled in PHP, MySQL, JavaScript, and AWS (EC2, S3, RDS, Lambda, Cognito), I deliver secure, high-performance solutions from concept to completion, meeting tight deadlines in dynamic environments. Developed high-performance Laravel-based web applications, prioritizing scalability and security. Implemented SSO authentication using JumpCloud and AWS services (Lambda, Cognito) for enhanced security and seamless cloud integration. Managed and optimized AWS-based applications for reliability and compliance with security standards. Consistently delivered projects on time, ensuring efficiency and client satisfaction.

INDUSTRIES: ERP, EDI CRM, Job portal, IT services, SaaS, Health care, Entertainment

TECHNICAL SKILLS

• PHP	5 years & 1 months
• Laravel	5 years
• MySQL	5 years & 1 months
• REST APIs	3 years & 1 months
• redis	3 years
• AWS	1 years
• PostgreSQL	6 months

PROJECT DETAILS

• ERP

Project Description: Collaborated with a team to build a comprehensive project from scratch, ensuring alignment with business goals. Developed a geofencing-based attendance system and integrated modules for geo-tracking and sales management to optimize operational efficiency. Managed seamless project hosting and deployment on AWS EC2, ensuring high availability and performance.
Responsibilities: Implemented Role-Based Access Control (RBAC) to enhance system security and user access management. Developed key modules, including a signature pad and ESS Board, to improve user interaction and functionality. Created dynamic application configuration and setup for flexible and scalable solutions. Utilized AWS S3 for efficient data storage and management, ensuring scalability and performance.
Technologies: Laravel, Livewire, AlpineJs, MySQL, AWS
Industry: ERP

• EDI CRM

Project Description: Partnered with clients to gather requirements and developed a tailored project from the ground up, ensuring alignment with their objectives. Delivered an advanced system for overseas education, including dynamic country selection, university and course selection, and a department- and branch-wise HRM system. Managed project deployment on AWS EC2 with cronjob scheduling for seamless and automated operations.

Responsibilities: Developed dynamic country selection and options to enhance the user experience for overseas education applications. Built an advanced university and course selection system to streamline educational decision-making processes. Implemented a department- and branch-wise HRM system with Role-Based Access Control (RBAC) for secure and efficient management. Utilized AWS S3 for scalable and efficient data storage and management. Configured and optimized EC2 deployments with cronjobs to ensure reliable and automated project execution.

Technologies: Laravel, AJAX, JQuery, MySQL, AWS

Industry: EDI CRM

• LaraDevs

Project Description: Built a new Projects feature for LaraDevs, incorporating a credit-based proposal submission system to streamline project management. Worked closely with clients to gather, refine, and align requirements with business objectives.

Responsibilities: Developed a Project & Proposal Management system using Filament Admin Panel and a user-friendly customer-facing UI. Implemented a credit-based mechanism for project submissions and proposal handling. Integrated state-based workflows to manage project approval and rejection processes efficiently. Enhanced functionality with Laravel Pennant to enable dynamic and flexible feature management.

Technologies: Laravel, Livewire, AlpineJs, FilamentPHP, MySQL

Industry: Job portal

• CSM

Project Description: Integrated secure Single Sign-On using JumpCloud with SAML2 for centralized authentication and efficient session management. Applied critical security headers, including CSP, HSTS, and X-Frame-Options, to safeguard against XSS, clickjacking, and other vulnerabilities.

Responsibilities: The CSM Invoice & Sales Management Portal, focusing on enhancing security and access control across multiple applications. Implemented Single Sign-On (SSO) authentication to streamline user access and resolve security issues, aligning with project requirements.

Technologies: CodeIgniter, MySQL, JumpCloud

Industry: IT services

• EMC

Project Description: Developed a Contract Management module for the EMC project using Core PHP MVC with Docarize, integrating seamlessly with existing data and relationships. Collaborated with stakeholders to deliver a robust solution for contract creation, management, and detailed workflows, enhancing operational efficiency.

Responsibilities: Built contract listing with search, filter, and pagination, plus a popup for creating contracts. Designed contract detail page with sidebar and input fields for billing, services, and dates. Added feature to copy serials from other contracts using a toggle and dropdown. Enabled edit/delete for contract details with simple modals and confirmations. Implemented soft delete for contracts, with deactivation for linked records

Technologies: PHP MVC, MySQL, Docker

Industry: SaaS

• ABC EASE

Project Description: Enhanced the ABC SaaS healthcare application by implementing robust security measures and seamless authentication across web and mobile platforms. Leveraged AWS Cognito to deliver secure user management and authentication, ensuring a scalable and reliable solution for healthcare application users.
Responsibilities: Integrated AWS Cognito for secure authentication, enabling smooth token management across web and mobile platforms. Improved the security of the ABC SaaS healthcare app by using Cognito user pools, identity federation, and built-in security features.
Technologies: Laravel, MySQL, Cognito
Industry: Health care

• EventMania

Project Description: Developed EventMania, a large-scale event management platform supporting web, mobile scanning, and POS for events, tickets, and packages. Enabled QR/barcode ticket scanning for seamless entry and real-time ticket statistics. Built for Android and Sunmi devices with tailored UI for efficient guest list management. Integrated features for real-time updates, ensuring synchronized organizer and staff workflows. Delivered robust marketing reports and attendee management tools for enhanced event operations.
Responsibilities: Resolved bugs across Filament and APIs to enhance module performance. Integrated seats.io for seating management and Kount360 for payment fraud protection. Developed SaaS-based vendor features for streamlined event operations. Built custom wallet and event closure report features using Filament PHP admin panel.
Technologies: Laravel, Livewire, AlpineJs, FilamentPHP, MySQL
Industry: Entertainment

EMPLOYMENT HISTORY

• PHP Developer

Description: Developed and utilized a custom AJAX prototype library to enhance dynamic web application functionality. Upgraded PHP CodeIgniter applications and other frameworks to meet evolving client requirements. Implemented clean, efficient code aligned with project specifications and business objectives. Maintained and optimized existing projects while designing and delivering new, high-quality solutions.

• Software Engineer

Nexus Corporate Solution Pvt. Ltd.
Description: Directed a team of 5 engineers in designing and developing a SaaS HRMS platform, successfully migrating its entire structure and applications. Created and maintained over 60+ websites, ensuring high performance and user satisfaction. Planned, developed, and deployed an in-house web-based ERP system, streamlining business operations. Troubleshot and resolved technical issues in production environments to ensure system reliability. Modified and validated existing MySQL database schemas to enhance performance and data integrity. Configured and deployed REST APIs, seamlessly integrating with third-party APIs to expand functionality. Leveraged AWS cloud services to optimize application deployment and scalability.

• Senior Software Engineer

7Span
Description: Developed and maintained robust APIs to support seamless integration and functionality across various applications. Worked extensively with Core PHP, MVC frameworks, CodeIgniter, and Filament, contributing to diverse projects with a focus on scalability and performance. Built and managed full-stack TALL (Tailwind, Alpine.js, Laravel, Livewire) projects, handling both front-end and back-end development. Took ownership of client requirements, ensuring clear communication, timely delivery, and high-quality solutions tailored to client needs.

EDUCATION

• Masters degree in Computer Applications from Gujarat Technological University — 2020 - 2022

LANGUAGES

• English - intermediate
