• MySQL	6 years & 1 months
• Testing	5 years & 1 months
• redis	3 years & 1 months
• AWS	1 years & 2 months
• PostgreSQL	6 months

PROJECT DETAILS

• Repticity

Project Description: Repticity is a basically checkin-checkout with screening questions system where the admin can view the visitors, checkin-checkout entries. On check-in time the system will detect the user's temperature and the facility admin can set the prevent entry on high temperature as well as screening answers. On checkout, user will get an SMS to review the facility on a scale of 1-10. It's built in PHP + Laravel + Mysql (Database).
Responsibilities: Survey Portal: The admin can manage questions and their attributes based on question types and surveys. They can assign questions, manage facility employees, and view survey results. Facility employees receive survey links according to the scheduled survey days and can submit their responses. Customer App: End users can generate check-in and check-out QR codes, manage their check-in/out history, and update their profiles. Facility Admin: Can view visitors, check-in logs, restricted entries, user feedback, and ratings. Can create blast messages, allowing multiple users to receive SMS or calls. Can set global emails for profanity notifications, update screening questions, and manage rating configurations. Super Admin: Can manage all facilities, approve blast texts, audio, and calls created by facility admins, review any profanity detected in check-in screens, and approve settings requested by facility admins.
Technologies: Core PHP, Laravel 9, MySQL, Socket.IO, Twilio
Industry: Health care

• Miskool

Project Description: Developed an order management system connected to SAP through SAP APIs. The application was built using Laravel and MySQL and is fully responsive across all devices.
Responsibilities: Multiple role management (Student, Principle, Parent, Teacher, Clerk etc.). Admin users are able to manage(Users, Schools, Roles, Wall, Groups, Events) Teacher and Principal users can able to manage their own school events, students, parents, teachers, etc. Admin users have access to manage schools and their modules like events, students, etc. All users like teachers, students, parents, etc. expect the admin to be able to add posts, like someone's posts as well as add comments for other posts for their school walls just like Facebook posts. Admin users have access to manage walls with schools wise. Admin users and school principle have access to delete posts or hide posts on walls. Any user of the school can create a group and invite any user of the same school and start communication in real time but he needs to add a compulsory one teacher and the teacher have access to remove any user at any time. Here group chat is implemented on Socket.Io
Technologies: Laravel 7.4, MySQL, Socket.IO
Industry: Education

• Dannemiller

Project Description: Developed an order management system integrated with SAP using SAP APIs. The application is built with Laravel and MySQL and is fully responsive on all devices.
