• Docker	18 years & 1 months
• relational database	18 years & 1 months
• REST APIs	7 years & 1 months
• Kotlin	7 years & 1 months
• AWS	7 years & 1 months
• Java	7 years & 1 months
• Spring Boot	7 years & 1 months
• Micro service	4 years & 1 months

SOFT SKILLS

Communication, Problem-solving

PROJECT DETAILS

• New loyalty product — August-2024 - August-2025

Project Description: Build a new product for loyalty business, for clients accumulate points or cashback and be abble to use the balance in discounts or external partners, like, miles programs.
Responsibilities: Draw architeture, develop micro services, frontend integration, deploy and monitoring
Technologies: Kotlin and AWS resources
Industry: Banking and Finance

• Refactor cashback process — January-2023 - August-2024

Project Description: In my actual job, I was appointed to maintenance from a customer's benefit process that was divided between my team and lets called team B, the benefit had a limit per year and the customer received it as cash back. But divided like it was, every evolution, every problem like a simple bug had to include both teams and even for the customer support team it was difficult to decide which team was responsible.
Responsibilities: I got those points and suggested to my team leader that to improve results and future evolutions was better that the process was entirely on our team, with the ok, I drew and presented the rewrite of the process in my team structure, after the approval I developed the solution, implemented and still do the monitoring, because the benefit is still active and the monitoring is constant. I highlit that situation because I participate in everything, see the problem, purpose the solution, deal with errors like concurrence and see the results after implementation, like the agility to the customer support team, which knows clearly which team is responsible for the process.
Technologies: Kotlin and AWS resources
Industry: Banking and Finance

EMPLOYMENT HISTORY

• Senior Backend developer — Senior Backend developer - Senior Backend developer

Description: - working as consultant at Banco BTG Pactual - Backend Kotlin developer, focus on maintenance and evolution of micro services based architecture - Clean Architecture, micro services, PostgreSQL - Spring Framework, Kafka, AWS, Git and Github - gradle - git e github
