MuleSoft Developer with 6.2 years of IT experience, including 4 years of strong hands-on expertise in MuleSoft integration solutions. Skilled in designing, developing, implementing, and testing end-to-end APIs and integration workflows. Proficient in DataWeave transformations, flow control, error handling, and reusable integration components. Experienced in API-led architecture, RAML specifications, and integrating diverse systems across cloud and on-prem environments. Adept at optimizing performance, ensuring security, and delivering scalable, maintainable solutions. Known for strong analytical skills, attention to detail, and the ability to collaborate effectively in Agile teams. Passionate about building robust integrations and staying updated with evolving MuleSoft advancements.

INDUSTRIES: Food Delivery, Health care

TECHNICAL SKILLS

• Mulesoft	4 years
• SQL support	2 years & 2 months
• health	1 years
• Banking	1 years
• Food	1 years

PROJECT DETAILS

• IPAAS Integration — March-2024 - September-2024

Project Description: Integrating and connecting API s for Delivery Channel and Processing Orders for Aggregators and provides all the required information to the Clients through API s Integration with Oracle DB and SQL Server.

Responsibilities: Involved in Designing API s Using RAML.Supported in debugging various flows and participated in code reviews to ensure coding standards and best practices.Configured Mule with error handling strategies such as On Error Continue and On Error Propagate that notifies the user with custom and simple error descriptions.Providing Summary Reports on Daily basis by fetching the records from oracle DB and MYSQL.Monitoring API Performance and creating a Visual data report using Anypoint Platform Monitoring tool.

Technologies: Mule 4, Anypoint studio, Anypoint Platform

Industry: Food Delivery

• United Health Group Inc — February-2023 - August-2024

Project Description: The MuleSoft Accelerator for Healthcare equips Payer, Provider, and Life Sciences organizations with foundational assets to accelerate their digital transformation journey. With our pre-built APIs, connectors, implementation templates, and reference architectures, IT teams can spend more time innovating rather than building from scratch.

Responsibilities: Patient 360 assets Includes two options HL7 v2 and FHIR R4 for surfacing patient demographics and clinical data from an EHR into Salesforce Health Cloud. Assets can be used for a variety of use cases and provide customers with a reference implementation to integrate with common EHRs such as Epic and Cerner via API.Labs integration assets Includes an asset to accelerate the transmission of laboratory results that identify a notifiable condition to public health agencies Includes assets to accelerate development of CRD, DTR, and PAS APIs to enable API-based prior authorizations between healthcare providers and payers to reduce administrative burden and drive better patient outcomes

Technologies: Mule 4, Anypoint studio, Anypoint Platform.

Industry: Health care

EMPLOYMENT HISTORY

• Mulesoft Developer March-2024 - September-2024

Description: Taking requirements from client.Designing RAML, appying policies to RAML. i have an experience in different types of connecters and have an experience in some of the application like wherescape for schedule the API's

EDUCATION

• Bachelors degree in Computers from ZNTU 2007 - 2011

LANGUAGES

• English - intermediate
