Effective and result-oriented professional software professional with more than 5 years of development experience. Expert working with LAMP stack (Linux, Apache, MySQL, PHP). Have full stack development experience developing both back-end API, microservices and front-end UI functionalities. Able to manage end to end life delivery life-cycle including enriching requirements, designing, development and deployments. Have worked and successfully delivered multiple projects working independently as well as part of the team. Delivering solutions following Agile process leveraging related concepts and tools such as Jira, CI/CD, GitLab etc.

INDUSTRIES: Event Management, Communications and Media, Real Estate, Ecommerce

TECHNICAL SKILLS

• PHP	5 years
• CodeIgniter	5 years
• JavaScript	4 years & 4 months
• Laravel	3 years & 5 months
• React	2 years & 7 months

PROJECT DETAILS

• Yapsody

Project Description: Yapsody is an online event management SaaS platform. It provides customers mechanism to plan various aspect of their events such as Ticketing, Capacity planning, Concert Showcase, Payment Management, Customer Website Integrations, Digital Marketing, Branding, Conversion Optimization, Audience Engagement etc. I worked on a multi suite product, consisting of mini products like Campaigns, admin, billings, and questionnaires. In this product customers can create campaigns and send marketing emails to all the contacts in its account.
Responsibilities: 1. Collaborate with product managers, designers, and developers, to identify requirements and ensure the application meet the intended goals. 2. Design and implement application services from initial concept and app architecture. 3. Developed the backend services using PHP and CodeIgniter. 4. Developed mechanisms to efficiently manage discounts and coupons for the global customers. 5. Designed and implemented the schema in MySQL. 6. Optimized SQL queries and resolved report inconsistencies on filtering by users or events. 7. Implemented services for Capacity Management, Payment Management, Files Management and Authentication features. 8. Implemented logging, custom error handling and created documentation for the backend services. 9. Collaborated with the QA team to analyze the reported bugs, investigate the root cause and fix the bugs.
Technologies: Backend: PHP Frontend: HTML, CSS, JavaScript, Smarty Template Frameworks: CodeIgniter Database: MySQL
Industry: Event Management

• CPaaS for TCIL

Project Description: Implemented the CPaaS for TCIL. CPaaS is Communications Platform as a Service which has unified communication services for WhatsApp, Email, SMS, and IVR. I worked on User Profile and Roles module. The platform supported multiple roles with privileges in order viz. Admin, Super Reseller, Reseller and client. A higher privileged user can manage users of lower privilege for its account.
Responsibilities: Responsibilities: 1. Identify the development tasks from business requirements, and strategically plan implementation of those tasks in the agile methodology. 2. Conceptualized, designed and developed the complete server end to end independently. 3. Implementation of REST API services. 4. Mechanism to map input JSON to target DB query language. 5. Serialization and deserialization of JSONs. 6. Designed and implemented the multi-level security access to the services including the encryption and token- based security systems. 7. Design and implement new features and functionalities. 8. Involved in design analysis, change request and functional change requirement of agile methodology
Technologies: Backend: PHP, Rest APIs, JSON, DB Query Language
Industry: Communications and Media

• Homebazaar

Project Description: HomeBazaar is a real estate platform facilitating buying and sale of properties. A buyer is able to find different properties in the desired locations, book tours of the properties, check reviews and ratings, shortlist their favorite properties and book meetings with the developers. The developers and owners are able to showcase and list their properties for sale in different locations within several price ranges.
Responsibilities: 1. Implemented backend APIs for different functionalities of the project. 2. Improved the SEO and increased the lighthouse report from 55 to 98. 3. Implemented pricing, search and review services. 4. Worked on UI using styling libraries. 5. Implemented various UI pages, functionalities and workflows in the application. 6. Implemented verification email feature for new customer sign-ups. 7. Developed components like property Buy card, property sell card, review & ratings, Q&A etc. 8. Developed search functionality in the application. 9. Implemented image management by dynamically fetching data from the server. 10. Implemented logging, custom error handling and documentation.
Technologies: Backend: PHP Frontend: HTML, CSS, JavaScript, Smarty Template Frameworks: CodeIgniter Database: MongoDB Role: Full Stack Developer
Industry: Real Estate

• American Eagle

Project Description: American Eagle Outfitters® (NYSE: AEO) is a leading global specialty retailer offering high-quality, on-trend clothing, accessories and personal care products at affordable prices under its American Eagle® and Aerie® brands. The company operates stores in the United States, Canada, Mexico, and Hong Kong, and ships to 81 countries worldwide through its websites. American Eagle and Aerie merchandise also is available at more than 200 international locations operated by licensees in 24 countries.

Responsibilities: 1. Implemented new components (design and behavioral logic) like survey popup modal, chatbot etc. 2. Integrated a package discount feature, allowing automatic detection of the highest applicable discount. 3. Set up a Cron job for sending anniversary emails to users, providing detailed account insights. 4. Integrated Pipedrive and established a cron job to track registered users for driving forward their journey. 5. Wrote unit, integration and rendering tests for different components. 6. Worked on migrating the services from legacy to newer versions of PHP. 7. Helped maintain and improve the efficiency of the code base. 8. Added analytics tracking logic to different interactive elements like buttons, links, popups etc. 9. Working on decoupling the modules of the project to improve reusability and maintenance. 10. Added logic to catch and show syntax errors and warnings in the pre-push scripts to keep the repositories clean and consistent.

Technologies: Backend: PHP Frontend: HTML, CSS, JavaScript, Smarty Template Frameworks: Laravel Database: MySQL

Industry: Ecommerce
