A software engineer adept in a startup and fast paced environment. Having success in building products, support and infrastructure. Experienced with working on distributed systems with remote and dynamic teams. Well versed in agile, low maintenance and self starting culture with getting work done attitude. Looking for an opportunity to create tooling to increase business and developer success with modern open source technologies.

INDUSTRIES: Social Network, FinTech

TECHNICAL SKILLS

• Swift	5 years & 8 months
• Swift Storyboard	5 years
• SwiftUI	3 years & 2 months
• Android	1 years & 2 months
• Python	1 years & 5 months

SOFT SKILLS

Python, HTML, Css, Node, Android

PROJECT DETAILS

• Noice March-2023 - September-2023

Project Description: Noice is a social media platform that allows users to share live Video audio Stream using paid Coins features. I was responsible for designing and developing features and live support, as well as collaborating with other developers and designers to ensure that applications met all requirements. I also unit tested and debugged code, improved the performance and efficiency of applications, and stayed up-to-date with the latest AppStore Connect requirements.
Responsibilities: Provide technical leadership and mentorship to the development team. Code and pull Request reviews. Contribute to architectural design and decisions for scalability and performance. Own feature development, ensuring high-quality code and user experiences. Optimize performance and address memory leaks for improved responsiveness. Integrate backend services, APIs, and databases into the iOS application. Write comprehensive unit and UI tests to ensure application reliability. Collaborate effectively with cross-functional teams and stakeholders. Maintain a well-organized and up-to-date codebase. Stay updated on the latest iOS advancements and propose innovative solutions. Investigate and resolve bugs and issues to ensure a smooth user experience. Accomplishments: Successfully launched a new feature of Noise-Live in the Noice.id app, which has been downloaded over 1.5 million times. Improved the performance of the Noice.id app by 20%. Improve User Experience and Engagement.
Technologies: Swift,VIPER, Combine, TDD, Protocol Oriented Programming, Amplitude, Agora, PromiseKit, SnapKit, CryptoSwift, SDWebImage, Google Login, Facebook Login ,Firebase, coredata, Core-Animation, WebRTC, Sockets, Jira, bitBucket, Source Tree, Figma, Cocoapods, XC
Industry: Social Network

• WAAFI January-2020 - March-2023

Project Description: WAAFI is an innovative lifestyle application that seamlessly combines mobile money, communication, entertainment, and productivity. Serving as a reliable mobile wallet, WAAFI enables swift and secure money transfers, cash-in, and cash-out transactions through a vast network of agents and ATMs. Users can also enjoy affordable communication options to stay connected with their friends and family. Additionally, the app offers a convenient platform to book travels, hotels, and flights, with exclusive discounts from partnered channels. WAAFI aims to simplify daily tasks and enhance user experiences through its unified, all-in-one approach.

Responsibilities: Improved product performance and features. Refined codebase to ensure great source code quality, best development practices are being followed and code coverage is taken into account. Worked on implementing the best possible solution using clean architecture paradigms. Implemented new solutions using Swift and Objective C. Migrated codebase from Objective-C to Swift. Revamped product architecture for future scalability of the product(MVC to MVVM). Implemented Data Binding with Boxing And Combine. Reduced the source code by 30% by using the reusability principle from clean architecture. Improve the app performance mostly CPU by limiting computation. Resolved the threading issue in the product. Migrated the persistence storage from SQLite to Core Data. Collaborated with a team of developers on the design, coding, testing, and deployment of various features. Actively contributed to the codebase, ensuring adherence to coding standards and best practices. Took ownership of specific features, ensuring accurate and timely implementation in line with project requirements and design specifications. Conducted thorough code reviews to maintain code quality, consistency, and alignment with project objectives, offering constructive feedback for improvement.

Technologies: Swift, Objective-C,MVC, MVVM, Combine, Protocol Oriented Programming, SDWebImage, Microsoft Login, coredata, Core-Animation, Azure DevOps, bitBucket, Source Tree, Figma, Cocoapods, XCode, Xcode Profiling, Alamofire, Azure CI/CD, Notifications, Django, Py

Industry: FinTech

EMPLOYMENT HISTORY

• Senior Software Development Engineer (SDE-3)

Description: Provide technical leadership and mentorship to the development team. Code and pull Request reviews. Contribute to architectural design and decisions for scalability and performance. Own feature development, ensuring high-quality code and user experiences. Optimize performance and address memory leaks for improved responsiveness. Integrate backend services, APIs, and databases into the iOS application. Write comprehensive unit and UI tests to ensure application reliability. Collaborate effectively with cross-functional teams and stakeholders. Maintain a well-organized and up-to-date codebase. Stay updated on the latest iOS advancements and propose innovative solutions. Investigate and resolve bugs and issues to ensure a smooth user experience.

• Senior Software Engineer February-2018 - March-2023

Builtinsoft

Description: Team Lead,Development new feature, Code Review Collaboration with distributed teams.

EDUCATION

• Bachelors degree in Computer Science from Khwaja Fareed University of Engineer and IT 2015 - 2020

LANGUAGES

• English - advanced
