I use my experience to build and launch production-ready applications. In addition, I'm passionate about growth-minded engineering cultures and environments that help teams and individuals do their natural best work and attain their fullest potential. Before finding the right solution, I insist on identifying the problem rightly and believe in taking ownership of my work. I architect systems and write code for humans. I follow best practices such as test-driven development, but I do not follow them dogmatically. I love to work with bold dreamers where decisions are product-focused instead of individual preferences.

INDUSTRIES: Software and Platforms

TECHNICAL SKILLS

• RSpec	7 years
• Rescue	7 years
• Ruby	7 years
• Oop concept	7 years
• RESTful API	7 years
• Git	7 years
• MySQL	7 years
• LMS	2 years
• MongoDB	2 years

PROJECT DETAILS

• Project 1 January-2020 - December-2023

Project Description: Created Restful http services to interact with Ul and was responsible for building the code to QA and Dev. Environments. Designed, developed and tested many consumers-based applications in an agile development methodology using Rails 4.1, (€SS3 and jQuery, HTMLS, Coffee Script, React JS, JSON, HAML, JavaScript and Bootstrap for better look and feel.

Responsibilities: Support Development Operations using foreman, Capistrano, Powder, guard, and various custom shell scripts to support continuous integration using Jenkins. For Database Migration used Active Records and also involved in using Active Resources, Fixtures, Action View and Action Controller in Rails framework. Extensive experience in Java script, XML, jQuery and HTML5. Configured AWS Multi Factor Authentication in IAM to implement 2 step authentications of user's access using Google authenticator and AWS \ Virtual MFA Used RESTful API to gather clouds related data for products and used Rspec to create test driven development. Developed well - tested, readable, reusable Ruby, JavaScript, HTML5 and CSS.

Technologies: Ruby, JavaScript, HTML5 and CSS.

Industry: Software and Platforms

• Project 2 January-2017 - December-2019

Project Description: I've helped develop and launch 8+ applications with Idyllic. Due to my experience working on multiple domains from career portals to insurance applications and building APIs for games to marketplaces, I am domain agnostic and versatile when building applications. I enjoy working with teams and can manage solo too with a cup of coffee. My new role entitles me to architect solutions that are scalable and maintainable.

Responsibilities: I've helped develop and launch 8+ applications with Idyllic. Due to my experience working on multiple domains from career portals to insurance applications and building APIs for games to marketplaces, I am domain agnostic and versatile when building applications. I enjoy working with teams and can manage solo too with a cup of coffee. My new role entitles me to architect solutions that are scalable and maintainable. My work with Idyllic involves building a career portal for NTT Communications and integrating intelligent resume parsers, a healthcare application, an AI chatbot, a full-fledged portal for hunting enthusiasts, etc. Worked on building an equipment rental system. We used Ruby on Rails, Share Tribe (Open-Source project t), JavaScript, AWS, Nginx to deliver the product. Worked on an Admin side customer management system. Developed various applications using Ruby on Rails, HTML5, CSS3, Git, Heroku, Java/ J2EE, JavaScript, Oracle, Microsoft SQL server, SQL Lite, PostgreSQL. The technology stack for this project was: Ruby-on-rails, PostgreSQL, JavaScript
