3+ of experience as Software Engineer with high degree of initiative continuously updating skill set with new techniques and technologies. Excellent computing software design development implementation and support with mentoring end user and client facing skills.

INDUSTRIES: Healthcare, Ecommerce

TECHNICAL SKILLS

• Java	3 years & 5 months
• Spring Boot	3 years & 5 months
• Microservices	3 years & 5 months
• MySQL	3 years & 5 months
• Multi Threading	3 years & 5 months

SOFT SKILLS

Good Communication Skills

PROJECT DETAILS

• Electronic Medical Record(EMR)

Project Description: EMR stands for Electronic Medical Record System, It is mainly used in Eye care clinic center. The current system in use is a paper-based system. It is too slow and cannot provide updated lists of patients within a reasonable time frame. To overcome the current system, we proposed this product , In this proposed System all activities happens electronically and the system will be used to get the information from the patient and the storing that data for future usage. These intentions of the system are to reduce over-time pay and increase the number of patients that can be treated accurately. It is permission driven application based on the user's skills.

Responsibilities: Involved in designing and developing smaller level modules for project requirements. Implement new enhancements and fixing bug. Involved in developing test cases as per project requirements. Interaction with client. Involved in project Review meetings. Involved in deploying and releasing the build. Interactions with the other teams to solve dependency problems. Involved in adding new functionalities and fixing the bugs

Technologies: core java, Spring and Spring Boot Hibernate, JSP, Java Script, Microservices

Industry: Healthcare

• Online Buy and Sale

Project Description: The Online shopping system is the application that allows the users to shop online without going to shops to buy them. Build a system to sell and buy any product like OLX. Our application will store the all products like OLX which is used for Buyers easily.An Online buy and sell application allow users to register their products at one platform where interested buyers can visit to buy the products.Its modules are User management, Product Management and Order management. Seller can post the products and buyers can see the products posted by sellers. When buyer is occurs, our application will show all the products and they can choose based on type as well cost wise they can filter. Once he satisfied the product, he can book that product

Responsibilities: Analyzes how well our application will work in the search engines. Tests and tracks how organic users reach our e-store-keywords, page position, etc. Detecting and reporting any operational issues on the application and fixing them fast Executing the plan, including developing and updating product content to help sales of that product. Written code for different layers such as controller, service, and repository. Handled different exceptions with respect to service and controller layer. Involved in adding new functionalities and fixing the bugs.

Technologies: Core Java , Spring Boot, Spring security, Microservices, Data structure and Algorithm Multithreading. Angular

Industry: Ecommerce

EMPLOYMENT HISTORY

• Software Engineer July-2022 - December-2022

Description: Worked as a Software Engineer

• Software Engineer August-2018 - November-2021

Atman Technologies

Description: Worked as a Software Engineer

EDUCATION

• Bachelors degree in Computer Application from Dr.D.Y. Patil Vidyapeeth, Pune 2011 - 2014

LANGUAGES

• English - advanced
